Fuzzy Analytical Hierarchy Process Disposal Method:

Intelligence Systems in Environmental Management: Theory and Applications Cengiz Kahraman, İrem Uçal Sari, 2016-09-03 This book offers a comprehensive reference guide to intelligence systems in environmental management. It provides readers with all the necessary tools for solving complex environmental problems where classical techniques cannot be applied. The respective chapters written by prominent researchers explain a wealth of both basic and advanced concepts including ant colony genetic algorithms, evolutionary algorithms, fuzzy multi criteria decision making tools, particle swarm optimization, agent based modelling, artificial neural networks, simulated annealing, Tabu search, fuzzy multi objective optimization, fuzzy rules, support vector machines, fuzzy cognitive maps, cumulative belief degrees and many others. To foster a better understanding, all the chapters include relevant numerical examples or case studies. Taken together, they form an excellent reference guide for researchers, lecturers, and postgraduate students pursuing research on complex environmental problems. Moreover, by extending all the main aspects of classical environmental solution techniques to its intelligent counterpart, the book presents a dynamic snapshot on the field that is expected to stimulate new directions and stimulate new ideas and developments.

Plastic Waste Management Kalim Deshmukh, Jyotishkumar Parameswaranpillai, 2024-03-11 Plastic Waste Management Comprehensive resource on innovative and breakthrough developments in plastic waste management covering a wide range of processing techniques and applications. Plastic Waste Management offers a complete guide to the best plastic waste management practices through recycling, incineration, landfill, and other processes, discusses applications of plastic waste management including energy generation, biochemical production, construction, and food packaging, covering current challenges relating to plastic waste, explaining the sources of waste and their routes into the environment, and providing systematic coverage of plastic waste treatment methods including mechanical processing, monomerization, blast furnace feedstock gasification, and thermal recycling. The book also discusses different biodegradation mechanisms of plastic wastes and ecotoxicity and ecological implications of marine plastic debris. From a cultural perspective, the book provides information regarding environmental and health implications, societal issues, and current challenges associated with plastic waste management. Written by leading experts in the field and edited by two highly qualified academics, Plastic Waste Management covers specific sample topics such as: A roadmap towards a circular economy and environmental sustainability via effective management strategies for plastic wastes; Implementation of an analytical hierarchy process for developing better waste collection systems and chemical recycling of plastic waste for sustainable development; Mechanisms, perspectives, and challenges for natural biodegradation of plastic wastes and conversion of plastic wastes into value added materials; Plastic wastes management and disposal in developing countries and challenges and strategies for plastic waste management during and post COVID 19 pandemic. Plastic Waste Management is a highly valuable resource for scientists and researchers working in the fields of environmental science, environmental engineering, and plastic engineering.

A two level interval valued neutrosophic AHP integrated TOPSIS methodology for post-earthquake fire risk assessment: An application for Istanbul Pelin Gulum,Ertugrul Ayyildiz,Alev Taskin Gumus, Earthquakes are the leading natural disasters that seriously affect human life Furthermore earthquakes are natural disasters that have the ability to trigger a second disaster in addition to the damages they cause From this point of view post earthquake fires are defined as the one of the most dangerous secondary disasters after an earthquake and often cause even more serious dangers For this reason government officials and relevant decision makers should effectively determine post earthquake fire risks and take necessary precautions In this study

we consider the problem of determining the fire risk after an earthquake as a multi criteria decision problem and present a two level framework for risk assessment The main and sub criteria are determined by a detailed literature review and Modified Delphi method is employed to gain and consolidate expert opinions
