Metaheuristics and Optimization in Civil Engineering Xin-She Yang, Gebrail Bekdaş, Sinan Melih Nigdeli, 2015-12-10

This timely book deals with a current topic i.e. the applications of metaheuristic algorithms with a primary focus on optimization problems in civil engineering. The first chapter offers a concise overview of different kinds of metaheuristic algorithms explaining their advantages in solving complex engineering problems that cannot be effectively tackled by traditional methods and citing the most important works for further reading. The remaining chapters report on advanced studies on the applications of certain metaheuristic algorithms to specific engineering problems. Genetic algorithm, bat algorithm, cuckoo search, harmony search, and simulated annealing are just some of the methods presented and discussed step by step in real application contexts in which they are often used in combination with each other. Thanks to its synthetic yet meticulous and practice-oriented approach, the book is a perfect guide for graduate students, researchers, and professionals willing to apply metaheuristic algorithms in civil engineering and other related engineering fields such as mechanical, transport, and geotechnical engineering. It is also a valuable aid for both lectures and advanced engineering students.

Harmony Search Algorithm Javier Del Ser, 2017-01-20. This book presents state-of-the-art technical contributions based around one of the most successful evolutionary optimization algorithms published to date. Harmony Search Contributions span from novel technical derivations of this algorithm to applications in the broad fields of civil engineering, energy, transportation, mobility, and health among many others, and focus not only on its cross-domain applicability but also on its core evolutionary operators including elements inspired from other metaheuristics. The global scientific community is witnessing an upsurge in groundbreaking new advances in all areas of computational intelligence with a particular flurry of research focusing on evolutionary computation and bio-inspired optimization. Observed processes in nature and sociology have provided the basis for innovative algorithmic developments aimed at leveraging the inherent capability to adapt, characterized by various animals including ants, fireflies, wolves, and humans. However, it is the behavioral patterns observed in music composition that motivated the advent of the Harmony Search algorithm, a metaheuristic optimization algorithm that over the last decade has been shown to dominate other solvers in a plethora of application scenarios. The book consists of a selection of the best contributions presented at ICHSA, a major biannual event where leading global experts on metaheuristic optimization present their latest findings and discuss the past, present, and future of the exciting field of Harmony Search optimization. It provides a valuable reference resource for researchers working in the field of optimization, metaheuristics, and a solid technical base for frontline investigations around this algorithm.
