Enterprise Identity Management Denis Royer, 2013-03-12 The introduction of Enterprise Identity Management Systems EIdMS in organizations even beyond the purely technological level is a costly and challenging endeavor However for decision makers it seems difficult to fully understand the impacts and opportunities arising from the introduction of EIdMS This book explores the relevant aspects for an ex ante evaluation of EIdMS Therefore it examines this domain by employing a qualitative expert interview study to better understand the nature of EIdMS as they are situated between security and productive IT systems To this regard the focus is put on the general nature of EIdMS projects and the constructs being relevant for analyzing such projects in the decision support phase Based on the derived constructs and

thematic topics from the interviews an explanatory model for EIDMS introductions is derived and iteratively improved and evaluated Finally a possible application use case for the creation of adequate decision support tools is presented

Bentley,1998 The fourth edition of Systems Analysis and Design Methods contains two new chapters on object oriented methods and a new chapter on purchased application packages *Proceedings of the ASME International Design Engineering Technical Conferences and Computers and Information in Engineering Conferences--2005* ,2005 Analysis of the Balanced Scorecard as a strategic controlling instrument with an example from the insurance industry Alexander Merl,2007-08-01 Bachelor Thesis from the year 2007 in the subject Business economics Business Management Corporate Governance grade 1 7 University of applied sciences Neuss FOM Fachhochschule f r Oekonomie Management Neuss language English abstract In view of the growing competition the increased change in customers wants and the potential of new communication and information technologies more and more companies are faced with the need to permanently adjust and further develop their processes products and offer To be able to exist in the market a company must be in a position to recognise future developments early and include them in the strategy A company should therefore use management instruments which make it able to adjust strategies quickly and communicate them transparently in the whole company There is increasing criticism of the classical controlling instruments It is argued that controlling is supposed to provide management relevant data for the management which do not only include financial historical information as so far but also include future related non monetary figures Against this background the Balanced Scorecard BSC is becoming more important It extends the previous focus on finance issues to assess the performance of a company with a range of other aspects and ratios The customer perspective the internal process perspective and the learning and development perspective are supposed to be considered equally next to the financial perspective in the BSC The targets of this thesis are split into a main target and a sub target The main target of this paper is split again into two parts The first part of the main target is to show and to explain the relevant theoretical framework of the BSC in particular to strategic controlling The second part of the main target is to analyse the BSC as a strategic management system and to give an overview about this strategic controlling tool as it is seen in academic literature The sub target of this paper is to provide a link between theory and practice by applying the theory to a current example taken from the insurance industry The result is a recommendation for a BSC as a strategic controlling instrument for that specific insurance company With this specific BSC for an insurance company comes also a tool for a well structured evaluation of the chances and risks involved with its application *Online and Distance Learning* Lawrence A. Tomei,2008 This comprehensive six volume collection addresses all aspects of online and distance learning including information communication technologies applied to education virtual classrooms pedagogical systems Web based learning library information systems virtual universities and more It enables libraries to provide a foundational reference to meet the information needs of researchers educators practitioners administrators and other stakeholders in online and distance learning Provided by publisher
