many college graduates today were not even born when the Web first emerged. It is therefore an opportune time to view the Web as having reached the point of graduation. The Web has led to new ways in which businesses connect and operate and how individuals communicate and socialize. Related technologies include cloud computing, social commerce, crowd sourcing, and the Internet of Things, to name a few. These developments, including their technological foundations and business impacts, are at the heart of the book. It contextualizes these topics by providing a brief history of the World Wide Web, both in terms of the technological evolution and its resultant business impacts. The book was written for a broad audience, including technology managers and students in higher education. It is also intended as a guide for people who grew up with a background in business administration or engineering or a related area but who, in the course of their career paths, have reached a point where IT-related decisions have become their daily business, e.g. in digital transformation. The book describes the most important Web technologies and related business applications and especially focuses on the business implications of these technologies. As such, it offers a solid technology and business-focused view on the impact of the Web and balances rules and approaches for strategy development and decision making with a certain technical understanding of what goes on behind the scenes.

Advances in Databases Brian Read, 2003-05-15. The ever-expanding growth of Information Technology continues to place fresh demands on the management of data. Database researchers must respond to new challenges, particularly to the opportunities offered by the Internet for access to distributed, semi-structured, and multimedia data sources. This volume contains the proceedings of the 18th British National Conference on Databases (BNCOD 2001) held at the Rutherford Appleton Laboratory in July 2001. In recent years, interest in this conference series has extended well beyond the UK. In selecting just eleven of the submitted papers for presentation, the programme committee has included contributors from The Netherlands, Germany, Sweden, Canada, and USA. In addition, two specially invited speakers address subjects of topical interest. Our first invited speaker is Professor Dr Rudi Studer from the University of Karlsruhe. At AIFB, the Institute for Applied Informatics and Formal Description Methods, he and his colleagues are in the forefront of work on the Semantic Web. This aims to make information accessible to human and software agents on a semantic basis. The paper discusses the role that semantic structures based on ontologies play in establishing communication between different agents. The AIFB web site has been developed as a semantic portal to serve as a case study.
