Modeling The Acoustic Transfer Function Of A Room:

Uncertainties in Acoustical Transfer Functions Pascal Dietrich, 2013 Measured transfer functions of acoustic systems are often used to derive single number parameters The uncertainty analysis is commonly focused on the derived parameters but not on the transfer function as the primary quantity This thesis presents an approach to assess the uncertainty contributions in these transfer functions by using analytic models Uncertainties caused by the measurement method are analyzed with a focus on the underlying signal processing In particular the influence of nonlinearities in the acoustic measurement chain are modeled to predict artifacts in the measured signals and hence the calculated acoustic transfer function Secondly characterization methods commonly applied in the field of signal processing are linked to the acoustic scenarios and the main influencing parameters Acoustic parameters are then derived analytically and by means of Monte Carlo simulations considering the uncertainty of these input parameters In order to provide airborne applications analytic models for sound barrier and room acoustic measurements are developed incorporating the directivity and the orientation of the sound source as well as the positions of sources and receivers The simulated uncertainty contributions are validated by measurements The same approach is also applied to structure borne sound applications

Head-Related Transfer Function and Virtual Auditory Display Bosun Xie, 2013-07-23 This book systematically details the basic principles and applications of head related transfer function HRTF and virtual auditory display VAD and reviews the latest developments in the field especially those from the author's own state of the art research group Head Related Transfer Function and Virtual Auditory Display covers binaural hearing and the basic principles experimental measurements computation physical characteristics analyses filter design and customization of HRTFs It also details the principles and applications of VADs including headphone and loudspeaker based binaural reproduction virtual reproduction of stereophonic and multi channel surround sound binaural room simulation rendering systems for dynamic and real time virtual auditory environments psychoacoustic evaluation and validation of VADs and a variety of applications of VADs This guide provides all the necessary knowledge and latest results for researchers graduate students and engineers who work in the field of HRTF and VAD *Advances in Sound Localization*

Pawel Strumillo, 2011-04-11 Sound source localization is an important research field that has attracted researchers efforts from many technical and biomedical sciences Sound source localization SSL is defined as the determination of the direction from a receiver but also includes the distance from it Because of the wave nature of sound propagation phenomena such as refraction diffraction diffusion reflection reverberation and interference occur The wide spectrum of sound frequencies that range from infrasounds through acoustic sounds to ultrasounds also introduces difficulties as different spectrum components have different penetration properties through the medium Consequently SSL is a complex computation problem and development of robust sound localization techniques calls for different approaches including multisensor schemes null steering beamforming and time difference arrival techniques The book offers a rich source of valuable material on advances

on SSL techniques and their applications that should appeal to researches representing diverse engineering and scientific disciplines

Soundscape Semiotics Hervé Glotin, 2014-03-05 Book Soundscape Semiotics Localization and Categorization is a research publication that covers original research on developments within the Soundscape Semiotics field of study The book is a collection of reviewed scholarly contributions written by different authors Each scholarly contribution represents a chapter and each chapter is complete in itself but related to the major topics and objectives The chapters included in the book are divided in two section First section Advanced Signal Processing Methodologies for Soundscape Analysis contains 5 chapters and second section Human Hearing Estimations and Cognitive Soundscape Analysis 3 chapters The target audience comprises scholars and specialists in the field
