Lateralization and cognitive systems Sebastian Ocklenburg,Christian Beste,Onur Gunturkun, Marco Hirnstein,2015-02-24 Left right asymmetries of structure and function are a common organization principle in the brains of humans and non human vertebrates alike While there are inherently asymmetric systems such as the human language system or the song system of songbirds the impact of structural or functional asymmetries on perception cognition and behavior is not necessarily limited to these systems For example performance in experimental paradigms that assess executive functions such as inhibition planning or action monitoring is influenced by information processing in the bottom up channel Depending on the type of stimuli used one hemisphere can be more efficient in processing than the other and these functional cerebral asymmetries have been shown to modulate the efficacy of executive functions via the bottom up channel We only begin to understand the complex neuronal mechanisms underlying this interaction between hemispheric asymmetries and cognitive systems Therefore it is the aim of this Research Topics to further elucidate how structural or functional hemispheric asymmetries modulate perception cognition and behavior in the broadest sense

Promoting Healthy Aging Across the Lifespan Elena Carrillo-Alvarez, Miriam Rodriguez-Monforte, Jordi Vilaró, Katherine Simone McGilton, 2024-12-26 Worldwide there is a generalized trend toward aged societies Between 2015 and 2050 the proportion of the world's population over 60 years will nearly double from 12% to 22% As life expectancy continues to increase and natality rates lower not only the composition of countries will change but also its health landscape However an increased life expectancy does not necessarily mean a healthy life In most high income countries more than 20% of those years are lived in ill health due to chronic conditions caused by non communicable diseases which compromises functional ability and well being key components of healthy aging In this way not only people's lives but also societal structures are being affected Based on the life course approach to healthy aging aging starts from conception In this regard the promotion of healthy aging requires preventive strategies that enhance capacities during growth and development maintain them for as long as possible after maturity and slow down their rate of decline Moreover considering healthy aging across the lifespan entails focusing on different factors life opportunities and choices that might significantly influence health status lifestyle as well as health and social inequalities in older age and challenges the focus of most research on the topic which exclusively investigates the effect of influences operating in the later stages of life

Energy Security and Development B. Sudhakara Reddy, Sergio Ulgiati, 2015-02-05 This volume provides a systematic framework for energy suppliers policy makers academics students and all others interested in energy security and analyzes key issues concerning energy security and sustainability with the help of a wealth of data While sustainability is the broadest objective energy security is an important part of it at the global national and societal levels The development of a sustainable long term solution to meeting the world's energy needs is a defining issue of our time since central global challenges that the world faces poverty alleviation climate change and environmental degradation are directly linked to energy security The contributions cover key issues in sustainable energy and illustrate that the insecurity of a majority of countries owes to internal factors which have more to do with market forces inefficient technologies lack of institutions environmental insecurity pricing mechanisms etc and less to do with the international situation The links between energy and development are both direct and indirect Directly energy provides several services and utilities to maintain human well being and also does so indirectly through stakeholders This volume addresses both the direct and indirect links and provides sustainable alternatives helping readers to better grasp the resilience of both socio economic and resource sub systems in the process The issues affecting energy supply and demand including technology portfolios environmental considerations and consumer attitudes are thoroughly discussed One of the critical questions that arises is how to facilitate energy investment The investment climate and the key issues involved are analyzed including the capital flows with reasonable and stable investment frameworks timely decision making by governments and open markets The broad objective of the volume is to

foster a deeper understanding of the concept of energy security and to identify the methods of analysis policy initiatives and future research needed to generate a balanced pattern of energy use and mitigate its impact on humanity and the environment
