 Surender Singh, Radha Prasanna, Kumar Pranaw, 2023-07-25 This edited book covers various bioinoculants for sustainable
 crop production under the changing global climate The book envisages a compilation of articles relevant to the current status
 of production and use of novel microbial inoculants for different crops and highlights their role in mitigating global climate
 challenges These include nutrient deficiencies salinity drought and emerging pathogens In addition success stories and
 commercialization aspects are also discussed Growing environmental concerns related to climate change can potentially
 decrease the global yield capacity of agricultural systems Agricultural productivity is severely affected by major biotic and
 abiotic factors The phytomicrobiome plays a critical role in the survival of the holobiont particularly for plants growing in
 extreme environments The use of microbial based agricultural inputs has a long history beginning with a broad scale
 rhizobial inoculation of legumes in the early twentieth century Microbial inoculants are considered one of the best and most
 effective strategies for sustainable agriculture under climate change and a viable solution to meet the twin challenges of
 global food security and environmental sustainability It is therefore imperative to understand the current status and
 development in the area of bioinoculants from a global perspective The chapter s focus would be on major agro ecologies
 covering all major crops across the globe along with the commercialization status of different bioinoculants in different
 countries The book caters to the needs of the students faculty policymakers and researchers working in the area of
