*Public Transit Planning and Operation* Avishai Ceder, 2016-03-09 Addresses the Challenges Facing Public Transport Policy Makers and Operators Public Transit Planning and Operation Modeling Practice and Behavior Second Edition offers new solutions for delivering both better services and greater efficiency solutions which have been developed and tested by the author in over thirty years of research work with mass transit policy makers and operators all over the world It bridges the worlds of practice and research and academia provides an overview and a critique of currently used operational planning methods and furnishes innovative practical techniques and modeling Improve Service Performance and Successfully Manage the Costs of Operation This new edition brings in new material on timetabling and vehicle scheduling with different vehicle sizes new methods of designing transit route networks analysis of transit coordination and connectivity behavioral aspects of

passengers including when making transfers and innovative methods related to automation and optimization which can be used in real time to significantly improve service reliability Combines academic research with real world project experience Focuses on issues encountered in practice Provides unique coverage of the field Public Transit Planning and Operation Modeling Practice and Behavior Second Edition incorporates a series of themes and new ways of thinking about planning and operation Bridging the gap between theory and application this text outlines the factors affecting public transport services addresses common problems and offers practical solutions for improvement

*International Conference on Advanced Intelligent Systems for Sustainable Development* Janusz Kacprzyk, Mostafa Ezziyyani, Valentina Emilia Balas, 2023-07-04 This book describes the potential contributions of emerging technologies in different fields as well as the opportunities and challenges related to the integration of these technologies in the socio economic sector In this book many latest technologies are addressed particularly in the fields of computer science and engineering The expected scientific papers covered state of the art technologies theoretical concepts standards product implementation ongoing research projects and innovative applications of Sustainable Development This new technology highlights the guiding principle of innovation for harnessing frontier technologies and taking full profit from the current technological revolution to reduce gaps that hold back truly inclusive and sustainable development The fundamental and specific topics are Big Data Analytics Wireless sensors IoT Geospatial technology Engineering and Mechanization Modeling Tools Risk analytics and preventive systems

Autonomic Road Transport Support Systems Thomas Leo McCluskey, Apostolos Kotsialos, Jörg P. Müller, Franziska Klügl, Omer Rana, René Schumann, 2016-05-03 The work on Autonomic Road Transport Support ARTS presented here aims at meeting the challenge of engineering autonomic behavior in Intelligent Transportation Systems ITS by fusing research from the disciplines of traffic engineering and autonomic computing Ideas and techniques from leading edge artificial intelligence research have been adapted for ITS over the last 30 years Examples include adaptive control embedded in real time traffic control systems heuristic algorithms e g in SAT NAV systems image processing and computer vision e g in automated surveillance interpretation Autonomic computing which is inspired from the biological example of the body s autonomic nervous system is a more recent development It allows for a more efficient management of heterogeneous distributed computing systems In the area of computing autonomic systems are endowed with a number of properties that are generally referred to as self X properties including self configuration self healing self optimization self protection and more generally self management Some isolated examples of autonomic properties such as self adaptation have found their way into ITS technology and have already proved beneficial This edited volume provides a comprehensive introduction to Autonomic Road Transport Support ARTS and describes the development of ARTS systems It starts out with the visions opportunities and challenges then presents the foundations of ARTS and the platforms and methods used and it closes with experiences from real world applications and prototypes of emerging applications This makes it suitable for researchers and practitioners in the fields of
