Characteristics of life state that living things must take in nutrients and remove wastes, needed for metabolic reactions and the products. The exchange of substances between the external and internal environments of a cell is a complex process and highly selective.

Trans-membrane exchange does not just occur in the cell membrane but also with all membrane bound organelles. Reactants must be able to enter the organelles so metabolic reactions can occur and their products must be removed.

The rate of diffusion is controlled by the concentration gradient that exists between the two sides or across the membrane.

The larger the concentration gradient the faster the rate of diffusion occurs.

Membranes are selectively permeable, which means that some substance can pass through freely while others can not or require assistance. The size and
