An Introduction to Multilevel Modeling Techniques Ronald H. Heck, Scott L. Thomas, 2015-03-05 Univariate and multivariate multilevel models are used to understand how to design studies and analyze data in this comprehensive text distinguished by its variety of applications from the educational behavioral and social sciences Basic and advanced models are developed from the multilevel regression MLM and latent variable SEM traditions within one unified analytic framework for investigating hierarchical data The authors provide examples using each modeling approach and also explore situations where alternative approaches may be more appropriate given the research goals Numerous examples and exercises allow readers to test their understanding of the techniques presented Changes to the new edition include The use of Mplus 7.2 for running the analyses including the input and data files at www.routledge.com 9781848725522 Expanded discussion of MLM and SEM model building that outlines the steps taken in the process the relevant Mplus syntax and tips on how to evaluate the models Expanded pedagogical program now with chapter objectives boldfaced key terms a glossary and more tables and graphs to help students better understand key concepts and techniques Numerous varied examples developed throughout which make this book appropriate for use in education psychology business sociology and the health sciences Expanded coverage of missing data problems in MLM using ML estimation and multiple imputation to provide currently accepted solutions Ch 10 New chapter on three level univariate and multilevel multivariate MLM models provides greater options for investigating more complex theoretical relationships Ch 4 New chapter on MLM and SEM models with categorical outcomes facilitates the specification of multilevel models with observed and latent outcomes Ch 8 New chapter on multilevel and longitudinal mixture models provides readers with options for identifying emergent groups in hierarchical data Ch 9 New chapter on the utilization of sample weights power analysis and missing data provides guidance on technical issues of increasing concern for research publication Ch 10 Ideal as a text for graduate courses on multilevel longitudinal latent variable modeling multivariate statistics or advanced quantitative techniques taught in psychology business education health and sociology this book's practical approach also appeals to researchers Recommended prerequisites are introductory univariate and multivariate statistics

Educational Policy Evaluation through International Comparative

Assessments Rolf Strietholt, Wilfried Bos, Jan-Eric Gustafsson, Monica Rosén, 2014 One of the most salient findings from the field of education is that there are huge national differences in student achievement as shown in international comparative studies like PISA and TIMSS The shockingly large gap between the highest performing countries mostly in East Asia and many European countries corresponds to a difference in attainment of two years of schooling Although this finding has been replicated in several studies the reasons for and consequences of such differences are currently not well understood This book is a collection of essays and studies by leading experts in international comparative education who demonstrate how international comparative assessments can be used to evaluate educational policies The volume is organized into two parts

that address first theoretical foundations and methodological developments in the field of international assessments and second innovative substantive studies that utilize international data for policy evaluation studies The intention of this book is to revisit the idea of using the world as an educational laboratory both to inform policy and to facilitate theory development
