The Mind's Past Michael S. Gazzaniga,1998-05-07 Why does the human brain insist on interpreting the world and constructing a narrative In this ground breaking work Michael S Gazzaniga one of the world s foremost cognitive neuroscientists shows how our mind and brain accomplish the amazing feat of constructing our past a process clearly fraught with errors of perception memory and judgment By showing that the specific systems built into our brain do their work automatically and largely outside of our conscious awareness Gazzaniga calls into question our everyday notions of self and reality The implications of his ideas reach deeply into the nature of perception and memory the profundity of human instinct and the ways we construct who we are and how we fit into the world around us Over the past thirty years the mind sciences have developed a picture not only of how our brains are built but also of what they were built to do The emerging picture is wonderfully clear and pointed underlining William James s notion that humans have far more instincts than other animals Every baby is born with circuits that compute information enabling it to function in the physical world Even what helps us to establish our understanding of social relations may have grown out of perceptual laws delivered to an infant s brain Indeed the ability to transmit culture an act that is only part of the human repertoire may stem from our many automatic and unique perceptual motor processes that give rise to mental capacities such as belief and culture Gazzaniga explains how the mind interprets data the brain has already processed making us the last to know He shows how what we see is frequently an illusion and not at all what our brain is perceiving False memories become a part of our experience autobiography is fiction In exploring how the brain enables the mind Gazzaniga points us toward one of the greatest mysteries of human evolution how we become who we are

Gazzaniga,2018-04-03 How do neurons turn into minds How does physical stuff atoms molecules chemicals and cells create the vivid and various worlds inside our heads The problem of consciousness has gnawed

at us for millennia In the last century there have been massive breakthroughs that have rewritten the science of the brain and yet the puzzles faced by the ancient Greeks are still present This book puts the latest research in conversation with the history of human thinking about the mind giving a big picture view of what science has revealed about consciousness The idea of the brain as a machine first proposed centuries ago has led to assumptions about the relationship between mind and brain that dog scientists and philosophers to this day The author asserts that this model has it backward brains make machines but they cannot be reduced to one New research suggests the brain is actually a confederation of independent modules working together Understanding how consciousness could emanate from such an organization will help define the future of brain science and artificial intelligence and close the gap between brain and mind
