**Abstract**—We present a new dataset with the goal of advancing the state-of-the-art in object recognition by placing the question of object recognition in the context of the broader question of scene understanding. This is achieved by gathering images of complex everyday scenes containing common objects in their natural context. Objects are labeled using per-instance segmentations to aid in precise object localization. Our dataset contains photos of **91 objects types** that would be easily recognizable by a 4 year old. With a total of **2.5 million labeled** instances in **328k** images, the creation of our dataset drew upon extensive crowd worker involvement via novel user interfaces for category detection, instance spotting and instance segmentation. We present a detailed statistical analysis of the dataset in comparison to **PASCAL**, **ImageNet**, and **SUN**. Finally, we provide baseline performance analysis for bounding box and segmentation detection results using a **Deformable Parts Model**.

**Making Art With Generative AI Tools** Hai-Jew, Shalin, 2024-04-01 In the dynamic realm of generative artificial Intelligence AI the fusion of human creativity and machine intelligence has created a vibrant ecosystem of collaborative artmaking However this transformative process brings forth a myriad of concerns ranging from ethical considerations and the need for originality to navigating the legal complexities surrounding intellectual property As more and more online communities appear around the use of AI to aid in the creation of images there arises a pressing need for a comprehensive guide that not only dissects the intricacies of artmaking with generative AI tools but also offers practical solutions to the evolving dilemmas faced by artists researchers and technologists Making Art With Generative AI Tools emerges as an exploration of the challenges posed by this intersection of human expression and artificial intelligence Artists engaging with generative AI find themselves grappling with issues of authenticity social toxicity and the commercial viability of their creations From avoiding stereotypical visuals to

Narrow and General Intelligence: Embodied, Self-Referential Social Cognition and Novelty Production in Humans, AI and Robots Karl Friston, Georg Northoff, Tony J. Prescott, Emily S. Cross, Sheri Marina Markose, 2026-01-26. A multi-disciplinary group of Topic Editors have been assembled to help take stock of the phenomenal success of narrow Statistical Artificial Intelligence and to examine new perspectives on achieving Artificial General Intelligence (AGI). A unique virtual roundtable was held on 5th November 2021 to accompany the Research Topic to critically examine the above themes while drawing on the considerable expertise of the Topic Editors and participants.
