Big data analytics refers to the strategy of analyzing large volumes of data or big data gathered from a wide variety of sources including social networks videos digital images sensors and sales transaction records Big data analytics allows data scientists and various other users to evaluate large volumes of transaction data and other data sources that traditional business systems would be unable to tackle Data driven and knowledge driven approaches and techniques have been widely used in intelligent decision making and they are increasingly attracting attention due to their importance and effectiveness in addressing uncertainty and incompleteness INFUS 2019 focused on intelligent and fuzzy systems with applications in big data analytics and decision making providing an international forum that brought together those actively involved in areas of interest to data science and knowledge engineering These proceeding feature about 150 peer reviewed papers from countries such as China Iran Turkey Malaysia India USA Spain France Poland Mexico Bulgaria Algeria Pakistan Australia Lebanon and Czech Republic **K Nearest Neighbor Algorithm** Fouad Sabry,2023-06-23 What Is K Nearest Neighbor Algorithm The k nearest neighbors technique also known as k NN is a non parametric supervised learning method that was initially created in 1951 by Evelyn Fix and Joseph Hodges in the field of statistics Thomas Cover later expanded on the original concept It has applications in both regression and classification In both scenarios the input is made up of the k training instances in a data collection that are the closest to one another Whether or not k NN was used for classification or regression the results are as follows The output of a k nearest neighbor classification is a class membership A plurality of an item s neighbors votes on how the object should be classified and the object is then assigned to the class that is most popular among its k nearest neighbors where k is a positive number that is often quite small If k is equal to one then the object is simply classified as belonging to the category of its single closest neighbor The result of a k NN regression is the value of a certain property associated with an object This value is the average of the values of the k neighbors that are the closest to the current location If k is equal to one then the value of the output is simply taken from the value of the one nearest neighbor How You Will Benefit I Insights and validations about the following topics Chapter 1 K nearest neighbors algorithm Chapter 2 Supervised learning Chapter 3 Pattern recognition Chapter 4 Curse of dimensionality Chapter 5 Nearest neighbor search Chapter 6 Cluster analysis Chapter 7 Kernel method Chapter 8 Large margin nearest neighbor Chapter 9 Structured kNN Chapter 10 Weak supervision II Answering the public top questions about k nearest neighbor algorithm III Real world examples for the usage of k nearest neighbor algorithm in many fields IV 17 appendices to explain briefly 266 emerging technologies in each industry to have 360 degree full understanding of k nearest neighbor algorithm technologies Who This Book Is For Professionals undergraduate and graduate students enthusiasts hobbyists and those who want to go beyond basic knowledge or information for any kind of k nearest neighbor algorithm *IJCAI-91* John Mylopoulos,Ray Reiter,1991
