States of Matter

Section 13.1 Gases

In your textbook, read about the kinetic molecular theory.

Complete each statement.

- The kinetic molecular theory describes the behavior of gases in terms of particles in motion.
- The kinetic molecular theory makes the following assumptions:
 - In a sample of a gas, the volume of the gas particles themselves is very small compared to the volume of the sample.
 - Between gas particles and the walls, there are no significant attractive or repulsive forces between gas particles.
 - Gas particles are in constant and random motion.
 - The collisions between gas particles are elastic, that is, no kinetic energy is lost.
- The kinetic energy of a particle is represented by the equation $KE = \frac{1}{2}mv^2$.
- Temperature is a measure of the average kinetic energy of the particles in a sample of matter.

In your textbook, read about explaining the behavior of gases.

For each statement below, write true or false.

- | | |
|--------------|--|
| <u>True</u> | 1. Gases are less dense than solids because there is a lot of space between the particles of a gas. |
| <u>True</u> | 2. The random motion of gas particles causes a gas to expand until it fills its container. |
| <u>False</u> | 3. The density of a gas decreases as it is compressed. |
| <u>True</u> | 4. A gas can flow into a space occupied by another gas. |
| <u>True</u> | 5. The diffusion of a gas is caused by the random motion of the particles of the gas. |
| <u>False</u> | 6. Lighter gas particles diffuse less rapidly than do heavier gas particles. |
| <u>True</u> | 7. During effusion, a gas escapes through a tiny opening into a vacuum. |
| <u>False</u> | 8. Graham's law of effusion states that the rate of effusion for a gas is directly related to the square root of its molar mass. |

curriculum that incorporates science practices with a guided inquiry approach. Students of all levels will gain a deep understanding of chemistry with this program. With Living by Chemistry, students learn chemistry in the same way that chemists work: by asking questions, collecting evidence, and thinking like scientists. Living by Chemistry is the product of a decade of research and development in high school classrooms focusing on optimizing student understanding of chemical principles. Author Angelica Stacy assisted in the development of the NGSS standards and served on the AP Chemistry redesign committee. She designed Living by Chemistry as an introduction for students who will take AP Chemistry or additional college classes. The curriculum was developed with the belief that science is best learned through first-hand experience and discussion with peers. Guided inquiry allows students to actively participate in and become adept at scientific processes and communication. These skills are vital to a student's further success in science as well as beneficial to other pursuits. Formal definitions and formulas are frequently introduced after students have explored, scrutinized, and developed a concept, providing more effective instruction. LBC's innovative curriculum offers much more than traditional programs. To help engage students of all levels, the curriculum provides a variety of learning experiences through activities, discussions, games, demos, lectures, labs, and individual work.
