Department of Transportation, 2007 Consists of amendments to the AASHTO LRFD bridge design specifications that were necessary to adapt the national code to California's bridge design practice Precast Substructure Design for Standard Bridge Systems Sarah Longstreth Billington, Robert W. Barnes, John Edward Breen, 1999 The proposed substructure system described in this report has been developed to improve the aesthetics and reduce the construction time of the support structures for standard bridges The form of the proposed substructures is highly attractive and is a distinct improvement over many traditional short and medium span bridge substructures The substructure system developed is particularly well suited for precasting although the geometric form could be cast in situ Precasting would result in the increased use of high performance concrete in the substructures The use of such concrete will bring improved durability since the high performance concrete is greatly resistant to ingress of moisture and chlorides In addition

the greater compressive strength of the high performance concretes is utilized for reducing the handling weight and dead load of the substructure units The bent cap units are more complex than traditional cast in place bent caps but appear feasible for plant production or large scale cast on site projects
