Competition Engine Building John Baechtel, 2012

The needs of a true competition engine are quite different than those of the engine under the hood of a typical commuter car From the basic design needs to the base component materials to the sizes of the flow related hardware to the precision of the machining to the capabilities of each pertinent system very few similarities exist Many books exist showcasing how to make street based engines more powerful and or durable This book is different in that it focuses purely on the needs of high rpm high durability high powered racing engines It begins by looking at the raw design needs and then shares how these needs are met at the various phases of an engine s development assembly testing and tuning This book features reviews of many popular modern tools techniques products and testing data collecting machinery Showing the proper way to use such tools how to accurately collect data and how to use the data effectively when designing an engine is critical information not readily available elsewhere The special needs of a competition engine aren t commonly discussed and the many secrets competition engine builders hold closely are openly shared on the pages here Authored by veteran author John Baechtel *Competition Engine Building* stands alone as a premier guide for enthusiasts and students of the racing engine It also serves as a reference guide for experienced professionals anxious to learn the latest techniques or see how the newest tools are used Baechtel is more than just an author as he holds or has held several World Records at Bonneville Additionally his engines have won countless races in many disciplines including road racing and drag racing
