**Human Blood Analysis** M. K. Bhasin, Surinder Nath, V. N. Sehgal, 2007 Blood a biological material is the most common evidence found in all types of forensic investigations There are two major areas of investigation Testing for biological evidence of kinship in civil cases and characterization of blood stains in criminal cases Blood groups typing is still the most commonly using immunological method employed by forensic serologists for the individualization of blood Certain enzymes and blood proteins exist in multiple genetically different forms In case of enzymes these forms are known as Isoenzymes The discovery of HLA polymorphism not only involves the variable alleles in individual loci but also the haplotypes of neighboring lined loci which increases the discrimination potential for individualization and association of some HLA antigens with particular ethnic groups thereby making them important from the forensic point of view The molecular biology has provided a more reliable techniques of DNA fingerprinting which has revolutionized the forensic analysis of blood evidence in crime investigation and today it is possible to provide valuable information in cases where scarce or and degraded amount of crime scene material could have been a limiting factor Population studies and generation of DNA databases and quality systems are further advancements in the forensic investigation of blood evidence The blood analysis proves useful for the forensic serologist in establishing the reliability of the results in any court of law

*Transgenics in Dispute* Cristiano Luis Lenzi, 2023-01-01 This book analyses the conflict over the release of transgenic soybean in Brazil based on a narrative analysis of political conflict At the end of the 1990s the commercial release of Roundup Ready RR soybean triggered a heated debate over the introduction of genetically modified organisms GMOs in Brazilian agriculture which developed into an open political conflict opposing pro and anti GMOs groups in Brazilian society This volume examines some of the structuring axes of this conflict by applying a narrative analysis of political conflict In this approach politics is perceived as a process of interpretive conflict in which participants in the political game seek to establish the lines that delimit the very definition of public issues under debate The issue of GMOs is understood from this perspective as a public controversy whose dynamics are shaped by the discourses that emerge from the dispute itself To analyze these controversies the book focuses on three axes of narrative analyses the conflict over distributives issues associated with the commercial release of RR soy the conflict over scientific uncertainty associated with the environmental risks of GMOs and the conflict over labeling policies

*Transgenics in Dispute* Political Conflicts in the

Commercial Liberation of GMOs in Brazil will be of interest to both social and environmental scientists concerned with the risks produced by the newest technologies that mediate our relationship with the environment and with the public debate that their use tends to provoke. This book is a translation of the original Portuguese edition *Transgênicos em disputa: Os conflitos políticos na liberalização comercial dos OGMs no Brasil* by Cristiano Luis Lenzi published in Brazil by Appris Editora in 2020. The translation was done with the help of artificial intelligence machine translation by the service DeepL.com. The author has subsequently revised the text further in an endeavour to refine the work stylistically. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.
