OpenLDAP Server Configuration on CentOS 7

OpenLDAP is an open-source implementation of Lightweight Directory Access Protocol developed by OpenLDAP project. LDAP is an Internet protocol that email and other programs use to look up contact information from a server. It is released under OpenLDAP public license; it is available for all major Linux distributions, AIX, Android, HP-UX, OS X, Solaris, Windows and z/OS.

It functions like a relational database in certain ways and can be used to store any information. LDAP is not limited to store the information; it is also used as a backend database for "single sign-on" where one password for a user is shared between many services.

In this tutorial, we will configure OpenLDAP for centralized login where the users use the single account to log in on multiple servers.

Mastering OpenLDAP Matt Butcher,2007 If you want to go beyond the fundamentals of OpenLDAP this is the guide you need Starting with the basics of installation it progresses to sophisticated aspects of the server for web applications and services Up to date with the latest OpenLDAP release Installing and configuring the OpenLDAP server Synchronizing multiple OpenLDAP servers over the network Creating custom LDAP schemas to model your own information Integrating OpenLDAP with web applications In Detail This book is the ideal introduction to using OpenLDAP for Application Developers and will also benefit System Administrators running OpenLDAP It prepares the reader to build a directory using OpenLDAP and then employ this directory in the context of the network taking a practical approach that emphasizes how to get things done On occasion it delves into theoretical aspects of LDAP but only where understanding the theory helps to

answer practical questions The reader requires no knowledge of OpenLDAP but even readers already familiar with the technology will find new things and techniques This book is organized into three major sections the first section covers the basics of LDAP directory services and the OpenLDAP server the second focuses on building directory services with OpenLDAP in the third section of the book we look at how OpenLDAP is integrated with other applications and services on the network This book not only demystifies OpenLDAP but gives System Administrators and Application Developers a solid understanding of how to make use of OpenLDAP s directory services The OpenLDAP directory server is a mature product that has been around in one form or another since 1995 It is an open source server that provides network clients with directory services All major Linux distributions include the OpenLDAP server and many major applications both open source and proprietary are directory aware and can make use of the services provided by OpenLDAP The OpenLDAP directory server can be used to store organizational information in a centralized location and make this information available to authorized applications Client applications connect to OpenLDAP using the Lightweight Directory Access Protocol LDAP and can then search the directory and if they have appropriate access modify and manipulate records LDAP servers are most frequently used to provide network based authentication services for users but there are many other uses for an LDAP server
