improve user experience strategies to facilitate ethical development of digital technology for healthcare and methods of encouraging adoption of advanced tools developed in line with principles of equitability and fairness Articles should address issues of user centered digital healthcare innovation driven by machine learning and immersive technologies Submissions should ideally be positioned at the intersection of digital technology development with user centered design although contributions more technical in nature as well as user experience studies are also welcome A non exhaustive list of suitable topics and manuscript types is given below Machine learning and or immersive technologies including augmented reality and virtual reality for user centered digital healthcare Clinical decision support systems Patient facing applications Tools for education and training of future medical professionals Potential barriers to adoption of technology issues of user experience trust equitability and fairness in digital healthcare Reviews and contributions discussing the development of intuitive accessible and inclusive digital interfaces All aspects of healthcare that are being or have the potential to be impacted by machine learning and immersive technologies **A Generalization of Bohr-Mollerup's Theorem for Higher Order Convex Functions** Jean-Luc Marichal,Naïm Zenaïdi,2022-07-06 In 1922 Harald Bohr and Johannes Mollerup established a remarkable characterization of the Euler gamma function using its log convexity property A decade later Emil Artin investigated this result and used it to derive the basic properties of the gamma function using elementary methods of the calculus Bohr Mollerup s theorem was then adopted by Nicolas Bourbaki as the starting point for his exposition of the gamma function This open access book develops a far reaching generalization of Bohr Mollerup s theorem to higher order convex functions along lines initiated by Wolfgang Krull Roger Webster and some others but going considerably further than past work In particular this generalization shows using elementary techniques that a very rich spectrum of functions satisfy analogues of several classical properties of the gamma function including Bohr Mollerup s theorem itself Euler s reflection formula Gauss multiplication theorem Stirling s formula and Weierstrass canonical factorization The scope of the theory developed in this work is illustrated through various examples ranging from the gamma function itself and its variants and generalizations q gamma polygamma multiple gamma functions to important special functions such as the Hurwitz zeta function and the generalized Stieltjes constants This volume is also an opportunity to honor the 100th anniversary of Bohr Mollerup s theorem and to spark the interest of a large number of researchers in this beautiful theory *The British National Bibliography* Arthur James Wells,2004 **Introduction to the Design & Analysis of Algorithms** Anany Levitin,2012 Based on a new classification of algorithm design techniques and a clear delineation of analysis methods Introduction to the Design and Analysis of Algorithms presents the subject in a coherent and innovative manner Written in a student friendly style the book emphasizes the understanding of ideas over excessively formal treatment while thoroughly covering the material required in an introductory algorithms course Popular puzzles are used to motivate students interest and strengthen their skills in algorithmic problem solving Other learning enhancement features include chapter summaries
