Guide for Strengthening of Concrete Structures FIB - International Federation for Structural Concrete,2022-05-01 The idea of preparing a technical document for the repairs and interventions upon concrete structures goes back to the former fib COM 5 Structural Service Life Aspects being the goal of the then TG 5 9 After a long period of reduced activity and taking into account the reorganization of fib commissions that meanwhile took

place on June 2017 a different approach was proposed to push forward the task of TG 8 1 formerly TG 5 9 The new goal of TG 8 1 was to deliver a how to do guide gathering together protection repair and strengthening techniques for concrete structures Chapters are intended to provide both guidelines and case studies serving as support to the application of fib MC 2020 pre normative specifications Each chapter was written by an editorial team comprising desirably at least a researcher a designer and a contractor Templates have been prepared in order to harmonize the contents and the presentation of the different methods Following the writing process chapters were reviewed by experts and after amendments by the authors they underwent a second review process by COM 8 and TG 3 4 members as well as by different practitioners For each protection repair and strengthening method addressed in this guide readers have a description of when to adopt it which materials and systems are required which techniques are available and what kind of equipment is needed It then presents a summary of stakeholders roles and qualifications design guidelines referring to most relevant codes and references the intervention procedure quality control measures and monitoring and maintenance activities Due to the extent of the guide it was decided to publish it as bulletin 102 addressing protection and repair methods and bulletin 103 addressing strengthening methods We would like to thank the authors reviewers and members of COM 8 and TG 3 4 for their work in developing this fib Bulletin which we hope will be useful for professionals working in the field of existing concrete structures especially those concerned with life cycle management and conservation activities As noted above this Bulletin is also intended to act as a background and supporting document to the next edition of the fib Model Code for Concrete Structures which is currently under development under the auspices of TG10 1 with the working title of fib Model Code 2020

Critical comparison of major seismic codes for buildings fib Fédération internationale du béton, 2013-01-01 fib Bulletin 69 illustrates and compares major buildings seismic codes applied in the different Continents namely U S Japan New Zealand Europe Canada Chile and Mexico Bulletin 69 was prepared by Task Group 7 6 of fib Commission 7 under the leadership of the late Professor Robert Bob Park which in tandem with Professor Paulay had developed in the seventies new fundamental design concepts most notably capacity design approach and structural design for ductility that had made the NZ seismic Code the most advanced one of the time This new approach has highly influenced the development of Eurocode 8 to which Bob Park has significantly contributed Bob Park was also well informed of the situation in Japan USA Canada and South America Such a wide view is reflected in Bulletin 69 showing similarities and differences among the major seismic codes accompanied as far as possible by comments hopefully useful for fostering international harmonization A comprehensive summary of the major codes is provided in the first chapter of the bulletin All codes are separately presented according to a common framework an introduction section which describes the history the philosophy the process development the performance based criteria the strength of materials and the incorporation of strength reduction factors of each code a second section devoted to the demand side which specify the seismic design actions and associated criteria of each code for

areas of different seismicity and for structures with different ductility properties requirements a third section devoted to the capacity side which describes the capacities of members and joints and associated criteria of each code including member strengths in flexure shear and bars anchorage desirable hierarchies of strength attainment deformation capacities of mechanisms of inelastic deformation detailing of beams columns and structural walls detailing of beam column joints for shear and the detailing of diaphragms The second chapter is devoted to the comparison of the more significant issues dealt in the considered codes This includes seismic design actions and associated criteria capacity design practice beams columns confinement structural walls and joints It is felt that fib Bulletin 69 represents a useful unique instrument for rapidly gaining an overview of the distinguishing features of the major world codes under both their conceptual framework and application rules
