Extraction Of Essential Oil Using Steam Distillation:

Extraction of Essential Oil Using Steam Distillation , A large number of herb materials contain Essential Oils with extensive bioactivities Acknowledging the importance of plants and its medicinal value extraction of Essential Oil had been done using Steam Distillation method In this project Steam Distillation was used to extract oil from different plant materials like eucalyptus leaves curry leaves hibiscus leaves lemon leaves marigold flowers rose flowers orange peels etc Research has confirmed centuries of practical use of essential oils and we now know that the fragrant pharmacy contains compounds with an extremely broad range of biochemical effects Essential oils are so termed as they are believed to represent the very essence of odor and flavor The recovery of Essential Oil the value added product from the raw botanical starting material is very important since the quality of the oil is greatly influenced during this step There are a variety of methods for obtaining volatile oils from plants Steam distillation method was found to be one of the promising techniques for the extraction of essential oil from plants as reputable distiller will preserve the original qualities of the plant The distillation was conducted in Clevenger apparatus in which boiling condensing and decantation was done Analysis of Essential oil was done using Gas Chromatography Mass Spectrometer apparatus which gives evaluates Essential Oil qualitatively and quantitatively Volume of Essential Oil obtained was changing w r t temperature and time of heating

Extraction of Essential Oils from Ginger Rhizome Using Steam Distillation Method Khairu Aizam Ibrahim,2006 Essential oils are highly concentrated essences of aromatic plants It can be extracted using a variety of methods such as steam distillation and solvent extraction Essential oils have a very high commercial value due to its therapeutic properties It is widely used in aromatherapy medicine and as well as flavoring food and drink industries To get the approximately pure essential oil from raw material conventional extraction technique like steam distillation is used Steam distillation is unlikely solvent extraction This is because steam distillation is to produce essential oils but solvent extraction will produce oleoresin Pure essential oil can be derived from a part of ginger plant that is the ginger rhizome by using steam distillation method The extraction of the ginger essential oils began when steam contact to the ginger in the extraction tank The steam carried out the essential oils from the ginger out of the rhizome and go through the condenser Then the steam with the essential oils will be condensed into liquid phase and will be collected in the beaker Lastly the two liquids will be separated To get high quality and quality of essential oils the fire from burner that burned the tank and produce steam in the tank must be well controlled Apart from being effective this study might as well discover potential savings in its operational cost and also environmental friendly

Phytochemical Techniques N. Raaman,2006 Phytochemicals are the individual chemicals from which the plants are made and plants are the key sources of raw material for both pharmaceutical and aromatic industries the improved methods for higher yield of active compounds will be the major incentive in these industries To help those who are involved in the isolation of compounds from plants some of the essential phytochemical techniques are included in this book The theoretical principles of various instruments handling

of samples and interpretation of spectra are given in detail Adequate chemical formulas are included to support and explain various structures of compounds and techniques The book will prove useful to students researchers professionals in the field of Plant Physiology and Pathology Pharmaceutical and Chemical Engineering Biotechnology Medicinal and Aromatic Plants and Horticulture
