Optimization Methods and Applications Xiao-qi Yang, Kok Lay Teo, Lou Caccetta, 2001-04-30 This edited book is dedicated to Professor N U Ahmed a leading scholar and a renowned researcher in optimal control and optimization on the occasion of his retirement from the Department of Electrical Engineering at University of Ottawa in 1999 The contributions of this volume are in the areas of optimal control non linear optimization and optimization applications They are mainly the improved and expanded versions of the papers selected from those presented in two special sessions of two international conferences The first special session is Optimization Methods which was organized by K L Teo and X Q Yang for the International Conference on Optimization and Variational Inequality the City University of Hong Kong Hong Kong 1998 The other one is Optimal Control which was organized by K Teo and L Caccetta for the Dynamic Control Congress Ottawa 1999 This volume is divided into three parts Optimal Control Optimization Methods and Applications The Optimal Control part is concerned with computational methods modeling and nonlinear systems Three computational methods for solving optimal control problems are presented i a regularization method for computing ill conditioned optimal control problems ii penalty function methods that appropriately handle final state equality constraints and iii a multilevel optimization approach for the numerical solution of optimal control problems In the fourth paper the worst case optimal regulation involving linear time varying systems is

formulated as a minimax optimal control problem

Encyclopedia of Food Science and Technology, 2000 Estimators for Uncertain Dynamic Systems A.I. Matasov, 1999-01-31 When solving the control and design problems in aerospace and naval engineering energetics economics biology etc we need to know the state of investigated dynamic processes The presence of inherent uncertainties in the description of these processes and of noises in measurement devices leads to the necessity to construct the estimators for corresponding dynamic systems The estimators recover the required information about system state from measurement data An attempt to solve the estimation problems in an optimal way results in the formulation of different variational problems The type and complexity of these variational problems depend on the process model the model of uncertainties and the estimation performance criterion A solution of variational problem determines an optimal estimator However there exist at least two reasons why we use nonoptimal estimators The first reason is that the numerical algorithms for solving the corresponding variational problems can be very difficult for numerical implementation For example the dimension of these algorithms can be very high **Optimization Methods in Operations Research and Systems Analysis** K.
