Genome Engineering via CRISPR-Cas9 System Vijai Singh, Pawan K. Dhar, 2020-02-18 Genome Engineering via CRISPR Cas9 Systems presents a compilation of chapters from eminent scientists from across the globe who have established expertise in working with CRISPR Cas9 systems. Currently, targeted genome engineering is a key technology for basic science, biomedical, and industrial applications due to the relative simplicity to which they can be designed, used, and applied. However, it is not easy to find relevant information gathered in a single source. The book contains a wide range of applications of CRISPR in research of bacteria, virus, algae, plant, and mammalian, and also discusses the modeling of drosophila, zebra fish, and protozoan among others. Other topics covered include diagnosis, sensor, and therapeutic applications, as well as ethical and regulatory issues. This book is a valuable source not only for beginners in genome engineering but also researchers, clinicians, stakeholders, policy makers, and practitioners interested in the potential of CRISPR Cas9 in several fields. Provides basic understanding and a clear picture on how to design, use, and implement the CRISPR Cas9 system in different organisms. Explains how to create an animal model for disease research and screening purposes using CRISPR. Discusses the application of CRISPR Cas9 systems in basic sciences, biomedicine, virology, bacteriology, molecular biology, neurology, cancer, industry, and many more.

The Gene Siddhartha Mukherjee, 2016-05-17 The 1 NEW YORK TIMES Bestseller. The basis for the PBS Ken Burns Documentary *The Gene: An Intimate History*. Now includes an excerpt from Siddhartha Mukherjee's new book *Song of the Cell*. From the Pulitzer Prize-winning author of *The Emperor of All Maladies*, a fascinating history of the gene and a magisterial account of how human minds have laboriously, ingeniously picked apart what makes us tick. Elle Sid Mukherjee has the uncanny ability to bring together science, history, and the future in a way that is understandable and riveting, guiding us through both time and the mystery of life itself. Ken Burns' Dr. Siddhartha Mukherjee dazzled readers with his Pulitzer Prize-winning *The Emperor of All Maladies* in 2010. That achievement was evidently just a warm-up for his virtuoso performance in *The Gene: An Intimate History*, in which he braids science, history, and memoir into an epic with all the range and biblical thunder of *Paradise Lost*. The New York Times. In this biography, Mukherjee brings to life the quest to understand human heredity and its surprising influence on our lives, personalities, identities, fates, and choices. Mukherjee expresses abstract intellectual ideas through emotional stories and swaddles his medical rigor with rhapsodic tenderness, surprising vulnerability, and occasional flashes of pure poetry. The Washington Post. Throughout the story of Mukherjee's own family, with its tragic and bewildering history of mental illness, reminds us of the questions that hang over our ability to translate the science of genetics from the laboratory to the real world. In riveting and dramatic prose, he describes the centuries of research and experimentation from Aristotle and Pythagoras to Mendel and Darwin, from Boveri and Morgan to Crick, Watson, and Franklin, all the way through the revolutionary twenty-first-century innovators who mapped the human genome. A fascinating and often sobering history of how humans came to understand the roles of genes in making us who we are, and

what our manipulation of those genes might mean for our future Milwaukee Journal Sentinel The Gene is the revelatory and magisterial history of a scientific idea coming to life the most crucial science of our time intimately explained by a master The Gene is a book we all should read USA TODAY **Issues of Terrorism in the Post-Coronavirus Era** Richard J.

relationships of specific genetic elements The class 2 type II CRISPR system involving a Cas9 endonuclease has been widely adopted to aid in making specific genomic DNA changes Precise DNA targeting by the CRISPR Cas9 system is achieved using an RNA molecule that encodes a 20 nucleotide nt sequence complementary to the target site Cas9 can be targeted to different loci in the genome by simply changing the 20 nt RNA encoded sequence Cas9 can then create DNA double strand breaks DSBs at the target site and induce DNA repair to incorporate a specific DNA edit or uncontrolled insertions and deletions to knock out a gene The CRISPR Cas9 system has also been adapted to create a precise DNA targeting module that can recruit different DNA effector systems such as transcriptional activators DNA deaminases and histone modifiers While CRISPR Cas9 has enabled new insights into genotype phenotype relationships challenges remain with the formation of unwanted edits such as off target edits or bystander edits with base editor systems Furthermore there is a lack of a generalizable method to create temporally controlled Cas9 based effector systems to allow investigation of temporally regulated genetic elements Here I use a chemically inducible Cas9 ciCas9 to explore the in vivo mechanisms of Cas9 off target editing and to develop a generalizable system to confer temporal control over a variety of Cas9 based effector systems Using engineered chemically controlled base editors I dissected the kinetics of bystander editing and how base editing at one nucleotide influences subsequent base edits within the same target site I envision the results presented here could be used to inform future efforts to study temporally regulated genetic elements and to engineer more efficient and accurate Cas9 based genome engineering systems
