Structural Engineering, Mechanics and Computation A. Zingoni, 2001-03-16 Following on from the International Conference on Structural Engineering Mechanics and Computation held in Cape Town in April 2001 this book contains the Proceedings in two volumes There are over 170 papers written by Authors from around 40 countries worldwide The contributions include 6 Keynote Papers and 12 Special Invited Papers In line with the aims of the SEMC 2001 International Conference and as may be seen from the List of Contents the papers cover a wide range of topics under a variety of themes There is a healthy balance between papers of a theoretical nature concerned with various aspects of structural mechanics and computational issues and those of a more practical nature addressing issues of design safety and construction As the contributions in these Proceedings show new and more efficient methods of structural analysis and numerical computation are being explored all the time while exciting structural materials such as glass have recently come onto the scene Research interest in the repair and rehabilitation of existing infrastructure continues to grow particularly in Europe and North America while the challenges to protect human life and property against the effects of fire earthquakes and other hazards are being addressed through the development of more appropriate design methods for buildings bridges and other engineering structures

Biomechanical Modelling and Simulation on Musculoskeletal System Yubo Fan, Lizhen Wang, 2022-03-01 The book involves the basic principles methods anatomy and other knowledge for modelling and simulation of the musculoskeletal system In addition abundant examples are presented in detail to help readers easily learn the principles and methods of modelling and simulation These examples include the impact injury and clinical application of the modelling of bone and muscle In terms of impact injury the book introduces the biomechanical simulation of impact injury in head spine ankle knee eyeball and many other parts With regard to clinical application it explores the optimization of orthopaedic surgery and design of orthopaedic implants Readers will find this is a highly informative and carefully presented book introducing not only the biomechanical principles in the musculoskeletal system but also the application abilities of modelling and simulation on the musculoskeletal system

Condition-Based Maintenance and Residual Life Prediction Chandan Deep Singh, Davinder Singh, Kanwal Jit Singh, Harleen Kaur, 2025-04-15 Condition Based Maintenance and Residual Life Prediction is essential for those looking to effectively implement condition based maintenance strategies and enhance fault detection through a comprehensive understanding of vibration data analysis and residual life prediction addressing key challenges in the field Issues related to condition based maintenance include its high initial cost new techniques that can be difficult to implement due to resistance older equipment that can be difficult to retrofit with sensors and monitoring equipment and difficult to access equipment during production that is difficult to spot measure Keeping the above issues in mind a general handbook for condition based maintenance and residual life prediction is required to carry out in fault detection Condition Based Maintenance and Residual Life Prediction aims to develop analyze and model condition based

maintenance and residual life prediction through vibration data The analysis of vibration responses will aid in developing a fault detection system The sources of vibration may be due to the presence of different types of defects such as cracks in the shaft a bent shaft or misalignment of shafts This will give designers a diagnostic tool for predicting the trends of vibration conditions leading to early fault detection The devised tool will be capable of quantifying the amplitude of vibration based on the severity of defects With the features available in the devised diagnostic tool the proposed model can be used for design predictive maintenance and condition based maintenance

Artificial Intelligence Technologies and Applications

Chenglizhao Chen,2024-02-15 Artificial Intelligence AI is rapidly becoming an inescapable part of modern life and the fact that AI technologies and applications will inevitably bring about significant changes in many industries and economies worldwide means that this field of research is currently attracting great interest This book presents the proceedings of ICAITA 2023 the 5th International Conference on Artificial Intelligence Technologies and Applications held as a hybrid event from 30 June to 2 July 2023 in Changchun China The conference provided an international forum for academic communication between experts and scholars in the field of AI promoting the interchange of scientific information between participants and establishing connections which may lead to collaboration research and development activities in related fields The 126 papers included here were selected following a thorough review process and are divided into 4 sections covering AI simulation and mechatronics intelligent network architecture and system monitoring intelligent algorithm modeling and numerical analysis and intelligent graph recognition and information processing Topics addressed include artificial neural networks computational theories of learning intelligent system architectures pervasive computing and ambient intelligence and fuzzy logic and methods Covering a wide range of topics and applications current in AI research the book will be of interest to all those working in the field
