Data Leadership for K-12 Schools in a Time of Accountability Mense, Evan G., Crain-Dorough, Mindy, 2017-12-15 The monitoring of data within educational institutions is essential to ensure the success of its students and faculty. By continually analyzing data, educational leaders can increase quality and productivity in their institutions. *Data Leadership for K-12 Schools in a Time of Accountability* explores techniques and processes of educational data analysis and its application in developing solutions and systems for instructional concerns and next generation learning. Providing extensive research covering areas such as data driven culture, student accountability, and data dissemination, this unique reference is essential for principals, administrators, practitioners, academicians, students, and educational consultants looking to maximize their institution's performance.

The Basics of Process Improvement Tristan Boutros, 2017-07-27 Unlike other books that promote a specific process and performance improvement discipline, this book shows organizations how to achieve success by fixing basic operational issues and problems using a broad and wide sweeping process based toolkit. In addition, it helps individuals who have worked in stale or siloed thinking enterprises make the transition.

Improving School Climate George G. Bear, 2020-03-04 *Improving School Climate* provides evidence based and practical strategies for cultivating a healthy school environment while also avoiding behavior problems. The book is packed with strategies centered on key components and conditions for a positive school climate, such as positive teacher-student relationships, positive student-student relationships, including absence of bullying, supportive home-school relationships, student engagement, effective classroom management, and school discipline, school safety, and student self-discipline. This text is an important inclusion for educators and school psychologists who prefer a structured, evidence based and practical approach for improving school climate while also promoting students' academic achievements, preventing behavior problems, and fostering students' social and emotional competencies.

Telemonitoring in Diabetes Care Management Marco ZEIMET,2005-08-06 Master s Thesis from the year 2004 in the subject Health Miscellaneous grade 74 100 Grade A First Class Brunel University DISC Department of IS and Computing course Master of Science Course at Brunel University London language English abstract Topic Area and Motivation Chronic disease care management in diabetes type II patients living at home and supported by telemonitoring equipment has proven to be both working and useful while adding health value from a clinical perspective Managerial decisions need however to be based on quantified cost estimations The challenge today is to show in which patient groups positive cost benefit results can be obtained by the use of telemedicine equipment The problem statement While numerous studies have shown clinical value and economical benefit separately there is a need to identify the cost benefit ratios applicable to different diabetic patient groups with varying risk levels The investment costs in expensive telemonitoring equipment need to be compared to associated clinical benefits obtained in the medium and long term timeframe The interest relevance and importance of the study lays in the cost estimating of care interventions provided to diabetes patient following care pathways in home care settings While similar work has been undertaken in the acute care settings with start end pathways the cost estimation of the diabetes follow up is challenged by a recurring loop back care pathway Aims and hypothesis While it is assumed that the use of telemedicine equipment and related care intervention costs are compensated by a reduction in complications and related health care costs the aim of the study is to provide a simple model for cost benefit analysis Methods Workload evaluation methods are used to cost estimate and cost quantify identified care pathway variables The resulting cost information is then used as input data in a simple microsimulation model Microsimulation is designed to identify the target group of instable diabetic patients for whom the use of telemedicine supported monitoring would produce both clinical added value and be cost effectiveness as compared to the conventional care delivery model Results The microsimulation model is producing a breakeven point cost benefit levels reached over determined periods of time thus identifying parameters about which patient profiles can be cost beneficially used for the telemedicine modality **The Routledge International Companion to**
