Conservation Biology Fred Van Dyke, 2008-02-29 Fred Van Dyke s new textbook Conservation Biology Foundations Concepts Applications 2nd Edition represents a major new text for anyone interested in conservation Drawing on his vast experience Van Dyke s organizational clarity and readable style make this book an invaluable resource for students in conservation around the globe Presenting key information and well selected examples this student friendly volume carefully integrates the science of conservation biology with its implications for ethics law policy and economics Ecological Explosions Daniel Simberloff, 2026-01-16 A leading biologist offers a comprehensive and accessible history of invasive species science from its earliest antecedents through its current research foci and controversies From the arrival of the naval shipworm in the Black Sea in the first millennium BC to the escape of the Burmese python in Florida in 1992 humans have moved species to new locations deliberately or inadvertently for thousands of years Agricultural and environmental impacts of some invasions were evident early although whether observers recognized that the cause was an introduced species is uncertain The history of invasion biology truly begins in the sixteenth through eighteenth centuries when explorers noticed European species on various distant islands and in North America In the nineteenth century biogeographers studying species distributions across the globe introduced the first native and non native species categorizations and prominent researchers like Charles Darwin began to describe the impacts of introduced species In the nineteenth and twentieth centuries as humans moved increasing numbers of species across the globe the advent of modern ecology deepened our understanding of the scope of the problem In Ecological Explosions invasive species expert Daniel Simberloff provides a thorough overview of

the development of invasion science from early research including from the perspectives of leading scientists like Aldo Leopold to the field's future. Simberloff explores the work of pioneering ecologists like Charles Elton antecedents of what became today's invasion biology before discussing the field's true emergence in the 1980s its explosive methodological and theoretical expansion its integration with other disciplines and its increasing visibility not only within the biological literature but also in government policies across the world in the 1990s Finally he investigates current controversies such as the debate over whether the entire science is xenophobic and asks how ecosystems might adapt to a rapidly globalizing world and ever increasing numbers of introduced species including the joro spider lionfish spotted lanternfly common reed and Asian carp

Fragmentation in Semi-Arid and Arid Landscapes Kathleen A. Galvin, Robin S. Reid, Roy H. Behnke, Jr., N. Thompson Hobbs, 2007-10-12 Casual readers of the title of this book might be forgiven for thinking that it is a little esoteric far removed from the pressing day to day concerns of humans and wildlife in the drylands of the world But they could not be more wrong It addresses an issue of the utmost practical importance in the world today yet does so on the basis of exciting new theory about how the world operates Of the billion or so human beings who now live in the world's arid and semi arid lands a majority depend on natural resources for their livelihoods These natural resources include livestock and their forage as well as the wild biota that creates opportunities for tourism or subsistence harvesting Arid and semi arid lands are spread over a third of the world's land surface from Colorado to the Kalahari the Sahel to the Simpson the Altai Steppe to Amboseli Notwithstanding their diversity these lands are broadly characterized by low productivity management at large scales and great climate variability in short by high spatial and temporal heterogeneity This book is about the implications of that high spatial and temporal heterogeneity for life management and policy in arid and semi arid lands
