Principles of Modern Radar Mark A. Richards, William L. Melvin, James A. Scheer, Jim Scheer, William A. Holm, 2012-10-16 Principles of Modern Radar Advanced Techniques is a professional reference for practicing engineers that provides a stepping stone to advanced practice with indepth discussions of the most commonly used advanced techniques for radar design It will also serve advanced radar academic and training courses with a complete set of problems for students as well as solutions for instructors This book provides an introduction to advanced radar methods available spanning the gamut of the most exciting radar capabilities from exotic waveforms to ultrahigh resolution 2D and 3D imaging methods complex adaptive interference cancellation multitarget tracking in dense scenarios and more The most uptodate methods such as multipleinput multipleoutput MIMO are covered All of this material is presented with the same careful balance of quantitative rigor and qualitative insight of Principles of Modern Radar Basic Principles SciTech 2010 **Operations Research Proceedings 2015** Karl Franz Dörner, Ivana Ljubic, Georg Pflug, Gernot Tragler, 2017-03-07 This book gathers a selection of refereed papers presented at the International Conference on Operations Research OR2015 which was held at the University of Vienna Austria September 1 4 2015 Over 900 scientists and students from 50 countries attended this conference and presented more than 600 papers in parallel topic streams as well as special award sessions Though the guiding theme of the conference was Optimal Decision and Big Data this volume also includes papers addressing practically all aspects of modern Operations Research **Fundamentals of Radar Signal Processing, Third Edition** Mark A. Richards, 2022-04-01 A complete guide to the full spectrum of fundamental radar signal processing systems fully updated for the latest advances This thoroughly revised resource offers comprehensive coverage of foundational digital signal processing methods for both pulsed and FMCW radar Developed from the author s extensive academic and professional experience Fundamentals of Radar Signal Processing Third Edition covers all of the digital signal processing techniques that form the backbone of modern radar systems revealing the common threads that unify them The basic tools of linear systems filtering sampling and Fourier analysis are used throughout to provide a unified tutorial approach You will get end of chapter problems that reinforce and apply salient points as well as an online suite of tutorial MATLAB R demos and supplemental technical notes Classroom instructors additionally receive a solutions manual and sample MATLAB tutorial demos Coverage includes An introduction to radar systems Signal models Data acquisition and organization Waveforms and pulse compression Doppler processing Threshold detection and CFAR Measurements and tracking Synthetic aperture imaging Adaptive array processing and STAP [Design of Unmanned Aerial Systems](#) Mohammad H. Sadraey, 2020-04-13 Provides a comprehensive introduction to the design and analysis of unmanned aircraft systems with a systems perspective Written for students and engineers who are new to the field of unmanned aerial vehicle design this book teaches the many UAV design techniques being used today and demonstrates how to apply aeronautical science concepts to their design Design of

Unmanned Aerial Systems covers the design of UAVs in three sections vehicle design autopilot design and ground systems design in a way that allows readers to fully comprehend the science behind the subject so that they can then demonstrate creativity in the application of these concepts on their own It teaches students and engineers all about UAV classifications design groups design requirements mission planning conceptual design detail design and design procedures It provides them with in depth knowledge of ground stations power systems propulsion systems automatic flight control systems guidance systems navigation systems and launch and recovery systems Students will also learn about payloads manufacturing considerations design challenges flight software microcontroller and design examples In addition the book places major emphasis on the automatic flight control systems and autopilots Provides design steps and procedures for each major component Presents several fully solved step by step examples at component level Includes numerous UAV figures images to emphasize the application of the concepts Describes real stories that stress the significance of safety in UAV design Offers various UAV configurations geometries and weight data to demonstrate the real world applications and examples Covers a variety of design techniques processes such that the designer has freedom and flexibility to satisfy the design requirements in several ways Features many end of chapter problems for readers to practice Design of Unmanned Aerial Systems is an excellent text for courses in the design of unmanned aerial vehicles at both the upper division undergraduate and beginning graduate levels
