**Discrete Event Systems: Modeling and Control** S. Balemi, P. Kozák, R. Smedinga, 2012-12-06 Research of discrete event systems is strongly motivated by applications in flexible manufacturing in traffic control and in concurrent and real time software verification and design just to mention a few important areas Discrete event system theory is a promising and dynamically developing area of both control theory and computer science Discrete event systems are systems with non numerically valued states inputs and outputs The approaches to the modelling and control of these systems can be roughly divided into two groups The first group is concerned with the automatic design of controllers from formal specifications of logical requirements This research owes much to the pioneering work of P J Ramadge and W M Wonham at the beginning of the eighties The second group deals with the analysis and optimization of system throughput waiting time and other performance measures for discrete event systems The present book contains selected papers presented at the Joint Workshop on Discrete Event Systems WODES 92 held in Prague Czechoslovakia on August 26 28 1992 and organized by the Institute of Information Theory and Automation of the Czechoslovak Academy of Sciences Prague Czechoslovakia by the Automatic Control Laboratory of the Swiss Federal Institute of Technology ETH Zurich Switzerland and by the Department of Computing Science of the University of Groningen Groningen the Netherlands

**The Relational Systems Model for Family Therapy** Carlton Munson, D Ray Bardill, 2015-12-22 The Relational Systems Model for Family Therapy presents a multi systems approach to family therapy that teaches the therapist important self differentiating capacities that set the tone for creating a powerful therapeutic atmosphere While the model demands no specific treatment procedures it does rely on the therapist s capacity to adhere to its basic ideas as she he is the most vital factor in the model s success In The Relational Systems Model for Family Therapy Author Donald R Bardill encourages the therapist to be the learning vehicle for the integration of the four realities of life self other context spiritual and the differentiating process that is necessary for human survival safety and growth Understanding this model allows therapists to lead clients to heightened self awareness and the realization of their human potential both important factors for intellectual growth emotional maturity and problem solving To this end readers learn about the self differentiating therapist the person of the therapist is the crucial variable in an effective family treatment process the facing process the client faces such issues as self identity life purpose thought and behavior patterns emotionalized fears and the future emotionalized right wrong focus is on consequences of actions rather than right wrong judgments in relationship issues life stances the uniqueness of the individual affects their connection to the life realities family grid a way for the therapist to organize and talk about important family systems dynamics the therapeutic paradox the client s worldview is examined through the therapist s worldview and a new worldview is formed The Relational Systems Model for Family Therapy is an important handbook for practitioners and students in the fields of clinical social work psychology marriage and family therapy mental health counseling counseling psychology pastoral counseling and

psychiatric nursing The book is also useful as a supplemental text for advanced undergraduate classes and postgraduate seminars in family therapy and family counseling The self differentiation nature of the content also lends this book useful to self help readers
