**Process-Driven Applications with BPMN** Volker Stiehl,2014-09-17 How can we optimize differentiating business processes and exploit their full potential Here Volker Stiehl provides answers utilizing the various options that the BPMN Business Process Model and Notation standard offers for planning implementing and monitoring processes The book presents an approach for implementing an architecture for applications that strives to find a balance between development and maintenance costs sustainability scalability and fault tolerance that meets flexibility requirements without becoming inordinately complex itself and that keeps the end application as abstract as possible from the system landscape in which it operates Based on the semantic enhancements found in version 2.0 of the BPMN standard which have made it possible to execute process models his approach exploits BPMN to create and run complete application architectures In this context BPMN is not just used to model the business processes of the application as the B in BPMN might suggest but also to model and execute the integration processes between the systems Throughout the book the software package SAP Process Orchestration is used to illustrate the implementation of the proposed architecture yet all recommendations are intentionally

kept generic so that they can be implemented on any other comparable platform as well Software architects IT managers software developers and project managers as well as students of information and business technology will find the book a valuable resource The proposed application architecture offers them a detailed blueprint the principles of which they can use to plan and implement process driven distributed applications      **SAP R/3 Plant Maintenance** Britta Stengl, Reinhard Ematinger, 2001 SAP R 3 Plant Maintenance offers a clear introduction to this small but sophisticated component and provides a highly practical guide to implementing PM Beginning with a examination of the key business processes underlying PM functionality the book goes on to cover all the crucial aspects of maintenance planning and execution in R 3 Particular attention is given to integrating plant maintenance with a company s natural process flow      **Management of Data** ,2010
