Quantitative Characterization of Microstructure of Asphalt Mixtures Amit Bhasin, Swapneel Badgekar, Anoosha Izadi, 2010 Designing Fine Aggregate Mixtures to Evaluate Fatigue Crack Growth in Asphalt Mixtures Anoosha Izadi, Amit Bhasin, Arash Motamed, 2011 Fatigue cracking is a significant form of pavement distress in flexible pavements The properties of the sand asphalt mortars or fine aggregate matrix FAM can be used to characterize the evolution of fatigue crack growth and self healing in asphalt mixtures This study compares the internal microstructure of the mortar within a full asphalt mixture to the internal microstructure of the FAM specimen This study also conducts a limited evaluation of the influence of mixture properties and methods of compaction on the engineering properties of the FAM specimens The results from this study although limited in number indicate that in most cases the SGC compacted FAM specimen had a microstructure that most closely resembled the microstructure of the mortar within a full asphalt mixture Another finding from this study was that at a given level of damage the healing characteristic of the three different types of FAM mixes was not significantly different This indicates that the healing rate is mostly dictated by the type of binder and not significantly influenced by the gradation or binder content as long as the volumetric distribution of the mastic was the same In other words the inherent healing characteristics of the asphalt binder plays a more significant role relative to other properties e g volumetrics in the overall fatigue cracking resistance of the asphalt mixture
