Embodying Data Qi Li, 2020-06-19 This book investigates a new interactive data visualisation concept that employs traditional Chinese aesthetics as a basis for exploring contemporary digital technological contexts It outlines the aesthetic approach which draws on non Western aesthetic concepts specifically the Yijing and Taoist cosmological principles and discusses the development of data based digital practices within a theoretical framework that combines traditional Taoist ideas with the digital humanities The book also offers a critique of the Western aesthetics underpinning data visualisation in particular the Kantian sublime which prioritises the experience of power over the natural world viewed at a distance Taoist philosophy in contrast highlights the integration of the surface of the body and the surface of nature as a Taoist body rather

than promoting an opposition of mind and body The book then explores the transformational potential between the human body and technology particularly in creating an aesthetic approach spanning traditional Chinese aesthetics and gesture based technology Representing a valuable contribution to the digital humanities the book helps readers understand data based artistic practices while also bringing the ideas of traditional Chinese aesthetics to Western audiences In addition it will be of interest to practitioners in the fields of digital art and data visualisation seeking new models *ECCWS 2019 18th European Conference on Cyber Warfare and Security* Tiago Cruz ,Paulo Simoes,2019-07-04 **Atlas of Knowledge** Katy Borner,2015-03-20 The power of mapping principles for visualizing knowledge illustrated by many stunning large scale full color maps Maps of physical spaces locate us in the world and help us navigate unfamiliar routes Maps of topical spaces help us visualize the extent and structure of our collective knowledge they reveal bursts of activity pathways of ideas and borders that beg to be crossed This book from the author of Atlas of Science describes the power of topical maps providing readers with principles for visualizing knowledge and offering as examples forty large scale and more than 100 small scale full color maps Today data literacy is becoming as important as language literacy Well designed visualizations can rescue us from a sea of data helping us to make sense of information connect ideas and make better decisions in real time In Atlas of Knowledge leading visualization expert Katy B rner makes the case for a systems science approach to science and technology studies and explains different types and levels of analysis Drawing on fifteen years of teaching and tool development she introduces a theoretical framework meant to guide readers through user and task analysis data preparation analysis and visualization visualization deployment and the interpretation of science maps To exemplify the framework the Atlas features striking and enlightening new maps from the popular Places Spaces Mapping Science exhibit that range from Key Events in the Development of the Video Tape Recorder to Mobile Landscapes Location Data from Cell Phones for Urban Analysis to Literary Empires Mapping Temporal and Spatial Settings of Victorian Poetry to Seeing Standards A Visualization of the Metadata Universe She also discusses the possible effect of science maps on the practice of science *Visualization in Scientific Computing '97* Wilfrid Lefer,Michel Grave,1997-09-18 Visualization is now recognized as a powerful approach to get insight in large datasets produced by scientific experimentations and simulations The contributions to this book cover technical aspects as well as concrete applications of visualization in various domains such as finance physics astronomy and medicine providing researchers and engineers with valuable information for setting up new powerful environments *Concepts and Techniques of Geographic Information Systems* Chor Pang Lo,Albert K.
