ABSTRACT

The ultimate objective of manufacturing industries is to increase productivity with high quality. At present, many manufacturing companies are facing problems such as high quality rejection, high inventories, high lead time, high costs of production, and inability to cope with customer orders.

By implementing and practicing the lean production system many problems can be solved without employing high-tech and high-toech approaches but by involving people on the shop floor in Kaizen activities. Kaizen is one of the powerful tools of lean manufacturing. Kaizen refers to continuous improvement in performance, cost and quality. Kaizen ensures that manufacturing processes become leaner and fitter, but eliminate waste (problem) where value is added.

The main objective of this paper is to provide a background on kaizen, present an overview of kaizen concepts that are used to transform a company into a high performing lean enterprise. A case study of implementation of Kaizen's has been discussed.

Keywords: Kaizen, Lean Manufacturing, Muda, Lead time...

I. INTRODUCTION

Kaizen means improvement. Moreover it means continuing improvement in domestic life and working life. Kaizen means continuing improvement involving everyone - from top management to managers and workers, when it is practiced at workplace (Imai, 1986).

The Kaizen philosophy has been implemented in organizations around the world as a way to improve production values while also improving employee morale and safety. The Kaizen philosophy may be applied to any workplace scenario due to its simple nature. Taiichi Ohno and Shigeo Shingo developed it at Toyota. The kaizen is important tool for Lean Manufacturing, the Toyota Production System (TPS). Just In Time other effective manufacturing strategies. (Koichi)

Kaizen - The Definition

Kaizen (Ky + zen) is a Japanese term that means continuous improvement, taken from words 'Kai', which means continuous and 'zen' which means improvement. Some translate 'Kai' to mean change and 'zen' to mean good, or for the better (Palmer, 2001).

II. LITERATURE REVIEW

In the literature that mentions kaizen is often emphasized small group activity such as quality circles and/or suggestions made by individual workers. In TPS (Ohno, 1978), which explains kaizen methods are useful to increase the productivity and product quality.

Suzaki (1987) explains that Kaizen is a philosophy widely practiced in belief that, that there is no end to make a process better. Each small improvement consists of many levels of development. Mainly used for improving manufacturing processes.

Teian (1992) describes that, Kaizen is much more than just a means of improvement, since it speak to the day by day obstacles happening in the work environment and the way in which these obstacles are succeed. Kaizen can be applied to where on need of improvement.

Deniels (1995) describes that the best approach to accomplish principal change on the shop floor is to empower operators to create their own particular measures, to adjust business procedures and to utilize them to drive their Kaizen exercises.

The author clarifies that operators are the specialists and once they understand that they are the one, who is going tackle the obstacles, and afterward everything they need is some direction.

A Case Study Sie-Min Lua, 2011 How to Do Kaizen Bunji Tozawa, PCS Inc., Norman Bodek, 2010-01-01 Kaizen Philosophy in a Modern Day Business Dilek Demirbas, Rhys Blackburn, David Bennett, 2020 Many scholars have mentioned about the importance of Kaizen philosophy in Japanese management and the concept is often shown as an underlying principle of Toyota Production System Lean Production and TQM However there is a great deal of inconsistency within literature of what Kaizen actually represents in a modern day business and most importantly in the perception of the average worker This research looks to explore how Kaizen is understood and perceived by the Supply Chain workforce of a UK Vehicle Manufacturer VMUK which is a British based tier 1 automotive manufacturer that produces over 507 000 cars per year Open since 1986 the site covers 2 square kilometres and employs over 7000 people With increasingly high levels of productivity the plant produces more cars per worker than any other factory in Europe Working to a strict yet efficient no defect policy the plant has become one of the largest manufacturers in the UK car industry As stated by Childerhouse et al 2003 this a significantly large competitive and pressurised industry which often acts as a barometer for today s environment and economy As a result VMUK are constantly focused on improvement and innovation to secure their position in the market VMUK excels through a variety of Japanese

manufacturing management techniques that have transformed the face of European car manufacturing Implementing a Just in Time delivery process VMUK rely on a network of in house suppliers to create an efficient and cost effective supply chain VMUK utilise electronic linkages to make orders with their suppliers with deliveries being made from sites that are located strictly within a 3 4 Mile radius Using this process requires a combination of flexibility and predictability Kumar and Midha 2001 but allows for a highly efficient synchronous supply of materials as and when they are required for production Important to this study VMUK pride themselves on their use of continuous improvement throughout the company but particularly within their in house supply network Using the knowledge and experience of direct line workers both internal and supplier VMUK benefit from the creation of incremental and applicable improvements The success of such improvements is to be discussed further in this study VMUK would be a great case study example of an Automotive industry organisation with existing consistent and efficient supply chain processes and strategies The company not only utilise Kaizen strategies but pride themselves in the efficiency of doing so providing an excellent area of research for this paper Furthermore there is a widely accepted belief that often non Japanese companies struggle establishing long term and effective Kaizen Using a case study we are interested to see how these techniques have been developed translated and implemented to an English majority workforce The study will look firstly to explore relevant areas of literature regarding Kaizen and its efficient implementation in part one After defining what Kaizen is and its origins advantages and requirements of Kaizen as well as the key principles set out in literature We also review strategies involved in creating continuous improvement such as Quality Circles and Teians and will give an expanded view on Lean Production techniques such as 5S SOP and Value Stream Mapping Then in part two the chosen methods to analyse the primary data will be explored This part will describe and justify the processes used and discuss the ethical consideration and limitations of the research Next in part three literature will be compared to primary research undertaken within VMUK consisting of 12 Semi structured qualitative interviews with members of staff from a variety of roles ages and experiences within the VMUK supply chain After that this part will discuss and analyse the key findings from the primary research conducted Theories discussed in the literature review section will be compared to the primary data to identify contrasts and correlations The final part within this study bring together the research to formulate conclusions relating back to the initial objective set out at the start of the research This part shows that with exceptions there is a lack of in depth understanding of Kaizen in the workforce likely as a result of poor training and education A bell curve is identified with those most knowledgeable and experienced with Kaizen being members of staff with 5 10 years of experience within VMUK Workers perceptions on the implementation principles advantages and requirements of Kaizen seem to be the most important aspects of the study The effectiveness of Kaizen is mainly depends on the company implementation of Kaizen even though the participants might believe Kaizen in concept is effective
