Engineering Complex Phenotypes in Industrial Strains Ranjan Patnaik,2012-09-19 This book highlights current trends and developments in the area of engineering strains The book details the current and future tools used in the production of bulk chemicals and biofuels from renewable biomass using green technologies Complex phenotypes are traits in a microbe that requires multiple genetic changes to be modulated simultaneously in the microorganism s DNA Knowing what those genetic changes are for a given trait and how to make those changes in the most efficient way forms the motivation behind writing this book This book explains the newer tools to develop and enable engineered strains at time scales much faster than the natural evolution process so that we can increase a cells production of a certain substance increase process productivity and extend metabolic capability This book provides a one stop platform of reference for practicing researchers in the field of industrial biotechnology This book also explains that the commercial success of a process that uses microbial catalysts over platforms that use chemical catalysts and fossil fuels depends on the time it takes to engineer these microbes to perform the desired reaction under harsh manufacturing conditions and at rates that meets the criteria for economic feasibility

Techniques to Measure Food Safety and Quality Mohidus Samad Khan,Mohammad Shafiur Rahman,2021-09-22 This book addresses the basic understanding of food contaminants and their sources followed by the techniques to measure food safety and quality It is divided into four parts Part A sources of contaminants in foods their associated health risks and integrated management and alternative options to minimize contaminants Part B Technological assessment of conventional methods and selected advanced methods for the detection identification and enumeration of microbial contaminates Part C Technological assessment of different chemical measurements techniques and Part D Technological assessment of different instrumental techniques to assess sensory properties of foods Food safety is a growing concern due to the increase in food borne illnesses caused by food adulteration excessive use of pesticides use of chemical preservatives and artificial fruit ripening agents microbial contaminations and improper food handling Chemical contaminants in food could be transferred from environmental or agrochemical sources personal care products and other by products of water disinfects In addition microbial food safety can be threatened due to the presence of many pathogens such as Salmonella Escherichia coli Clostridium botulinum Staphylococcus aureus and Listeria monocytogenes in foods Globally strict regulations are imposed to limit the potential contaminants in foods Development of accurate rapid and inexpensive approaches to test food contamination and adulteration would be highly valued to ensure global food safety There are existing processes to ensure safety of food products from chemical and microbial contaminants Apart from the existing measurement technologies varieties of new techniques are also being emerged and these could be potential to ensure food safety and quality In addition to chemical and microbial properties

sensory properties such as texture mouth feel flavor and taste are among the most important attributes of food products to ensure their acceptability by consumers Two approaches are available to evaluate sensory properties of food products namely subjective and objective analyses The responses are perceived by all five senses smell taste sight touch and hearing The approach used in sensory evaluation varies depending on the types of foods and the ultimate goal of the testing Sensory attributes are the most important quality parameters after ensuring the safety of foods
