Air Navigation Octavian Thor Pleter, 2024-04-22 This book takes a new approach to air navigation extending the classic scope of positioning and guidance to efficient and safe 4D flight trajectory management Modern air navigation aims at flight trajectories optimisation There is an infinite number of solutions to the classic navigation problem of flying from one airport to another but most of them are wasteful of resources and even risky Minimising all costs and risks incurred by the 4D flight trajectory makes air navigation both efficient and safe which are key factors in air navigation services Beyond minimising fuel burn and CO2 efficiency addresses non CO2 emissions and noise This is a visually intensive book using examples and case studies to illustrate the concepts the physics of navigation and the mathematical models involved Numerical examples reflect its problem solving nature It is useful to aerospace students engineers pilots air traffic controllers technicians and scientists curious about aviation

Human Factors in Multi-Crew Flight Operations Harry W. Orlandy, 2017-07-05 With the pace of ongoing technological and teamwork evolution across air transport there has never been a greater need to master the application and effective implementation of leading edge human factors knowledge Human Factors in Multi-Crew Flight Operations does just that Written from the perspective of the well informed pilot it provides a vivid practical context for the appreciation of Human Factors pitched at a level for those studying or engaged in current air transport operations Features Include A unique seamless text intensively reviewed by subject specialists Contemporary regulatory requirements from ICAO and references to FAA and JAA Comprehensive detail on the evolutionary development of air transport Human Factors Key statistics and analysis on the size and scope of the industry In depth demonstration of the essential contribution of human factors in solving current aviation problems air transport safety and certification Future developments in human factors as a core technology Extensive appendices glossary and indexes for ease of reference The only book available to map the evolution growth and future expansion of human factors in aviation it will be the text for pilots and flight attendants and an essential resource for engineers scientists managers air traffic controllers regulators educators researchers and serious students

Exploring the Martian Moons Manfred "Dutch" von Ehrenfried, 2017-04-11 This book explores the once popular idea of Flexible Path in terms of Mars a strategy that would focus on a manned orbital mission to Mars's moons rather than the more risky expensive and time consuming trip to land humans on the Martian surface While currently still not the most popular idea this mission would take advantage of the operational scientific and engineering lessons to be learned from going to Mars's moons first Unlike a trip to the planet's surface an orbital mission avoids the dangers of the deep gravity well of Mars and a very long stay on the surface This is analogous to Apollo 8 and 10 which preceded the landing on the Moon of Apollo 11 Furthermore a Mars orbital mission could be achieved at least five years possibly 10 before a landing mission Nor

would an orbital mission require all of the extra vehicles equipment and supplies needed for a landing and a stay on the planet for over a year The cost difference between the two types of missions is in the order of tens of billions of dollars An orbital mission to Deimos and Phobos would provide an early opportunity to acquire scientific knowledge of the moons and Mars as well since some of the regolith is presumed to be soil ejected from Mars It may also offer the opportunity to deploy scientific instruments on the moons which would aid subsequent missions It would provide early operational experience in the Mars environment without the risk of a landing The author convincingly argues this experience would enhance the probability of a safe and successful Mars landing by NASA at a later date and lays out the best way to approach an orbital mission in great detail Combining path breaking science with achievable goals on a fast timetable this approach is the best of both worlds and our best path to reaching Mars safely in the future
