Benoît Marchal, 2000 *Artful Making* offers the first proven research based framework for engineering ingenuity and innovation This book is the result of a multi year collaboration between Harvard Business School professor Robert Austin and leading theatre director and playwright Lee Devin Together they demonstrate striking structural similarities between theatre artistry and production and today s business projects and show how collaborative artists have mastered the art of delivering innovation on cue on immovable deadlines and budgets These methods are neither mysterious nor flaky they are rigorous precise and with this book s help absolutely learnable and reproducible They rely on cheap and rapid iteration rather than on intensive up front planning and with the help of today s enabling technologies they can be applied in virtually any environment with knowledge based outputs Moreover they provide an overarching framework for leveraging the full benefits of today s leading techniques for promoting flexibility and innovation from agile development to real options

Genetic Programming Theory and Practice XII Rick Riolo, William P. Worzel, Mark Kotanchek, 2015-06-04 These contributions written by the foremost international researchers and practitioners of Genetic Programming GP explore the synergy between theoretical and empirical results on real world problems producing a comprehensive view of the state of the art in GP Topics in this volume include gene expression regulation novel genetic models for glaucoma inheritable epigenetics combinatorics in genetic programming sequential symbolic regression system dynamics sliding window symbolic regression large feature problems alignment in the error space HUMIE winners Boolean multiplexer function and highly distributed genetic programming systems Application areas include chemical process control circuit design financial data mining and bioinformatics Readers will discover large scale real world applications of GP to a variety of problem domains via in depth presentations of the latest and most significant results

**Theory and Applications of Satisfiability Testing** Fahiem Bacchus, Toby Walsh, 2005-06-02 The 8th International Conference on Theory and Applications of Satisfiability Testing SAT2005 provided an international forum for the most recent research on the satisfiability problem SAT SAT is the classic problem of determining whether or not a propositional formula has a satisfying truth assignment It was the first problem shown by Cook to be NP complete Despite its seemingly specialized nature satisfiability testing has proved to be extremely useful in a wide range of different disciplines both from a practical as well as from a theoretical point of view For example work on SAT continues to provide insight into various fundamental problems in computation and SAT solving technology has advanced to the point where it has become the most effective way of solving a number of practical problems The SAT series of conferences are multidisciplinary conferences intended to bring together researchers from various disciplines who are interested in SAT Topics of interest include but are not limited to proof systems and proof complexity search algorithms and heuristics analysis of algorithms theories beyond the propositional hard instances and random formulae problem encodings industrial applications solvers and other tools This volume contains the papers accepted for presentation at SAT 2005 The conference attracted a record number of 73 submissions Of these 26 papers were accepted for presentation in the technical programme In addition

16 pers were accepted as shorter papers and were presented as posters during the technical programme

The accepted papers and poster papers cover the full range of topics listed in the call for papers

**Open Information Management: Applications of Interconnectivity and Collaboration** Niiranen, Samuli, Yli-Hietanen, Jari, Lugmayr, Artur, 2009-05-31 Discusses the impact of emerging trends in information technology towards solutions capable of managing information within open principally unbounded operational environments

**Logic Programming** John Lloyd, 1995 The International Logic Programming Symposium is one of two major international conferences sponsored by the Association of Logic Programming Both conferences are held annually The theme for the 1995 conference was Declarative Systems particularly the integration of the logic programming functional programming and object oriented programming paradigms

**Performance Modelling with Deterministic and Stochastic Petri Nets** Christoph Lindemann, 1998-03-05 This text provides an up to date treatment of the fundamental techniques and algorithms for numerical analysis of deterministic and stochastic Petri nets a particular stochastic modelling formalism and the application of this modelling formalism to performance analysis for parallel computer architectures

Programming Models for Massively Parallel Computers, 1993 Wolfgang Giloi, Stefan Jähnichen, Bruce D. Shriver, 1993 Proceedings Parallel Computing

**Proceedings**, 2003 The ASE conference is the major conference for theory and practice concerned with automating the software development process Formerly known as Knowledge Based Software Engineering KBSE the conference expanded in order to reach out to other scientific communities concerned with the automation aspects of formal methods software process human computer interaction requirements engineering reverse engineering testing and verification and validation while still including an active artificial intelligence and knowledge based research focus

ACM Transactions on Programming Languages and Systems Association for Computing Machinery, 2003 Contains articles on programming languages and their semantics programming systems storage allocations and garbage collection languages and methods for writing specifications testing and verification methods and algorithms specifically related to the implementation of language processors

*Parallel and Distributed Systems*, 1994 *International Conference On* Lionel M. Ni, 1994 The complete proceedings of the December 1994 conference containing some 120 papers addresses and sessions on topics such as teraflop computing architecture independent parallel programming parallel algorithms FDDI ATM networks load balancing distributed mutual exclusion interconnection net

*Aspects of Computation on Asynchronous Parallel Processors* Margaret H. Wright, 1989 The increasing availability of asynchronous parallel processors has provided opportunities for original and useful work in scientific computing However the field of parallel computing is still in a highly volatile state and researchers display a wide range of opinion about many fundamental questions such as models of parallelism approaches for detecting and analyzing parallelism of algorithms and tools that allow

software developers and users to make effective use of diverse forms of complex hardware This volume collects the work of researchers specializing in different aspects of parallel computing who met to discuss the framework and the mechanics of numerical computing The far reaching impact of high performance asynchronous systems is reflected in the wide variety of topics which include scientific applications e g linear algebra lattice gauge simulation ordinary and partial differential equations models of parallelism parallel language features task scheduling automatic parallelization techniques tools for algorithm development in parallel environments and system design issues

**Modern Compiler Design** Dick Grune, 2000-10-11 While focusing on the essential techniques common to all language paradigms this book provides readers with the skills required for modern compiler construction All the major programming types imperative object oriented functional logic and distributed are covered Practical emphasis is placed on implementation and optimization techniques which includes tools for automating compiler design
