Design of Fibre-Polymer Composite Structures João R. Correia,Thomas Keller,Jan Knippers,J. Toby Mottram,Carlo Paulotto,José Sena-Cruz,Luigi Ascione,2025-06-18 The European Technical Specification CEN TS 19101 2022 Design of Fibre Polymer

Composite Structures constitutes a milestone for the use of fibre polymer composites in civil engineering works. This book comprises around 400 background reports covering the most relevant paragraphs of the Technical Specification. It provides supplementary information to the Technical Specification, justifies the options that were followed and introduces references that were considered. Among other aspects, this makes it possible to assess the basis of design, the values adopted for partial factors, conversion factors and creep coefficients, provisions for structural analysis, resistance models for structural members, connections and joints, and provisions for durability and detailing. The book also identifies research needs in this field to increase knowledge of the behaviour of fibre polymer composite structures and for possible future development of the Technical Specification towards a Eurocode standard. The only guide to practical fibre polymer structural design in accordance with the principles and terminology of the structural Eurocodes, this book is ideal for professional engineers working in structural design, as well as a source of consensus information for graduate students and researchers in the area.

Analysis and Performance of Fiber Composites Bhagwan D. Agarwal, Lawrence J. Broutman, K.

Analysis and Performance of Fiber Composites Fourth Edition features updated and expanded coverage of all technical aspects of fiber composites including the latest trends and developments in materials manufacturing processes and materials applications, as well as the latest experimental characterization methods. Fiber reinforced composite materials have become a fundamental part of modern product manufacturing. Routinely used in such high tech fields as electronics, automobiles, aircraft, and space vehicles, they are also essential to everyday staples of modern life such as containers, piping, and appliances. Little wonder when one considers their ease of fabrication, outstanding mechanical properties, design versatility, light weight, corrosion and impact resistance, and excellent fatigue strength. This Fourth Edition of the classic reference, the standard text for composite materials courses worldwide, offers an unrivalled review of such an important class of engineering materials. Still the most comprehensive up to date treatment of the mechanics, materials performance, analysis, fabrication, and characterization of fiber composite materials available. Analysis and Performance of Fiber Composites Fourth Edition features Expanded coverage of materials and manufacturing with additional information on materials processes and material applications. Updated and expanded information on experimental characterization methods including many industry specific tests. Discussions of damage identification techniques using nondestructive evaluation (NDE). Coverage of the influence of moisture on performance of polymer matrix composites, stress corrosion of glass fibers and glass reinforced plastics, and damage due to low velocity impact. New end of chapter problems and exercises with solutions found on an accompanying website. Computer analysis of laminates. No other reference provides such exhaustive coverage of fiber composites with such clarity and depth. Analysis and Performance of Fiber Composites Fourth Edition is without a doubt an indispensable resource for practicing engineers as well as students of mechanics.
