Diagram 5-b. A deformation reducing the perimeter at fixed area.

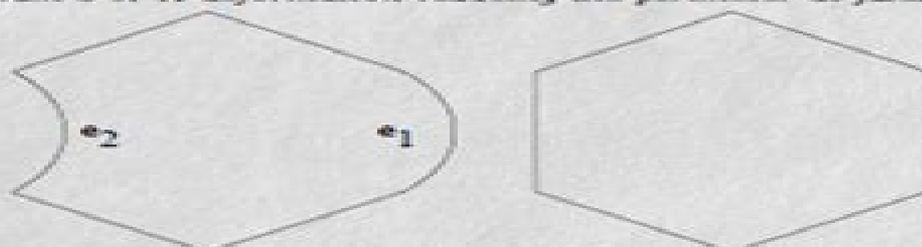

If any $x(e) < -\tau_0$, we decrease the curvature of e until $x(e) = -\tau_0$. This leaves $T(P)$ unchanged, decreases the perimeter, and increases area(P). Thus, there is no loss in generality, if we assume $x(e) \geq -\tau_0$ for all e.

We leave edges e with $x(e) > \tau_0$ untouched.

If there are two edges e_1, e_2 of P with $0 < x(e_1) \leq \tau_0$ and $x(e_2) < 0$ (and so also $x(e_2) \geq -\tau_0$), we deform P by decreasing the curvature of the arcs e_1 and e_2 preserving $x(e_1) + x(e_2)$, thereby decreasing the perimeter $L(P)$ (see Diagram 5-b). $T(P)$ is unchanged. Continuing in this way, we may assume without loss of generality that all $x(e) \in [-\tau_0, \tau_0]$ have the same sign. We consider two cases depending on whether there is an edge e with $x(e) > \tau_0$.

(Case I) For all e, $x(e) \geq -\tau_0$, and there exists e such that $x(e) > \tau_0$. All $x(e) \in [-\tau_0, \tau_0]$ have the same sign.

(Case II) For all e, $|x(e)| \leq \tau_0$. All $x(e)$ have the same sign.

The theorem will be proved by a separate argument for the two cases.

6. LOWER BOUNDS ON $L(P)$.

We were not able to find a single estimate of $L(P)$ that leads to the Theorem in all cases. Instead, we rely on number of lower bounds on $L(P)$ (and $\Delta(P)$). Most are based on the isoperimetric inequality.

Lower bound $L(N, \alpha, X)$. $N = 3, 4, \ldots$. The perimeter of a regular N-gon of area 1 is $2\sqrt{\pi_N}$, where $\pi_N = N \tan(\pi/N)$. The polygon $(f_1, \ldots, f_N)$ has area at least $\alpha - X$. By the isoperimetric inequality for polygons, it has perimeter at least

$$L(N, \alpha, X) := 2\sqrt{(\alpha - X)\pi_N}.$$

Each arc e_i has length at least that of f_i, so $L(P) \geq L(N, \alpha, X(P))$.

Lower bound L_+. By the isoperimetric inequality,

$$L(P) \geq L_+(\alpha) := 2\sqrt{\pi\alpha},$$

the perimeter of a circle of area α.

Conjecture and Proof Miklós Laczkovich,2022-08-11 The Budapest semesters in mathematics were initiated with the aim of offering undergraduate courses that convey the tradition of Hungarian mathematics to English speaking students This book is an elaborate version of the course on Conjecture and Proof It gives miniature introductions to various areas of mathematics by presenting some interesting and important but easily accessible results and methods The text contains complete proofs of deep results such as the transcendence of e the Banach Tarski paradox and the existence of Borel sets of arbitrary finite class One of the purposes is to demonstrate how far one can get from the first principles in just a couple of steps Prerequisites are kept to a minimum and any introductory calculus course provides the necessary background for understanding the book Exercises are included for the benefit of students However this book should prove fascinating for any mathematically literate reader   **Conjecture & Proof** Diane Driscoll Schwartz,1997   Proof Paul David Brown,2010

Curricular Resources and Classroom Use Gabriel J. Stylianides,2016-05-06 Curricular resources include the different kinds of materials digital or physical that teachers use in or for their teaching textbooks lesson plans etc and have a significant influence on students opportunities to learn At the same time teachers play a crucial role as interpreters of such materials so there is a complex relationship between curricular resources and their classroom use This book aims to bridge these rather disconnected but highly related programs of research by describing comparing and exemplifying new research approaches for studying in connected ways both curricular resources and their classroom use thereby supporting also investigation of the complex interplay between the two In addition to implications for research the book has implications for curriculum development and teacher education Specifically the book deepens understanding of how curriculum developers can better exploit the potential of curricular resources to support classroom work and how teacher educators can better
