Context And Context Aware Umd Department Of Computer:

Personal Wireless Communications Marco Conti, Silvia Giordano, Enrico Gregori, Stephan Olariu, 2003-10-02 This book constitutes the refereed proceedings of the IFIP TC6 Eighth International Conference on Personal Wireless Communications PWC 2003 PWC 2003 is the flagship conference of the IFIP Working Group 6.8 Mobile and Wireless Communications and is the premier international forum for discussions between researchers practitioners and students interested in the symbiosis of mobile computing and wireless networks It is a great pleasure to present the PWC 2003 technical program This year the conference received 115 submissions from 27 countries indicating that PWC is a reference conference for worldwide researchers from the wireless and mobile community With so many papers to choose from the Technical Program Committee's job to provide a conference program of the highest technical quality was challenging and time consuming From the 115 submissions we finally selected 34 full papers and 15 short papers for presentation in the conference technical sessions The conference technical program was split into three days and included in addition to the 49 refereed contributions 4 invited papers from top level researchers from the mobile and wireless community To give researchers the opportunity to present ongoing work and the novel ideas they are starting to explore we included in the technical program two work in progress sessions and two novel ideas sessions The technical program also included a poster session devoted to presenting ongoing research projects on wireless and mobile communications

Pervasive Computing Alois Ferscha, Friedemann Mattern, 2004-04-07 Welcome to the proceedings of PERVASIVE 2004 the 2 International Conference on Pervasive Computing and the premier forum for the presentation and appraisal of the most recent and most advanced research results in all fundamental and applied areas of pervasive and ubiquitous computing Considering the half life period of technologies and knowledge this community is facing PERVASIVE is one of the most vibrant dynamic and evolutionary among the computer science related symposia and conferences The research challenges efforts and contributions in pervasive computing have experienced a breathtaking acceleration over the past couple of years mostly due to technological progress growth and a shift of paradigms in computer science in general As for technological advances a vast manifold of tiny embedded and autonomous computing and communication systems have started to create and populate a pervasive and ubiquitous computing landscape characterized by paradigms like autonomy context awareness spontaneous interaction seamless integration self organization ad hoc networking invisible services smart artifacts and everywhere interfaces The maturing of wireless networking miniaturized information processing possibilities induced by novel microprocessor technologies low power storage systems smart materials and technologies for motors controllers sensors and actuators envision a future computing scenario in which almost every object in our everyday environment will be equipped with embedded processors wireless communication facilities and embedded software to perceive perform and control a multitude of tasks and functions

Personal Wireless Communications, 2003 **Perspectives of Information Systems** Vesa Savolainen, 1999-06-24

This book focuses on several issues in the essence of information systems and their development as well as advanced utilization of new information technology. It includes both theoretical foundations and practical approaches for each topic and will prove useful both to scientists in the field of information system science and to practitioners in information systems development and use. Many of the topics treated here have not appeared in the literature although they are becoming increasingly important in the development of information systems. Topics covered include contingencies in IT decision making, intelligent executive information systems, dynamic performance evaluation of information systems, exception handling in information systems, metamethodology of information system development, and mobile computing. The outstanding feature of the book is its specific mixture of subjects under one framework of thinking about information systems. A useful book to researchers and systems developers, the book can also form the basis of an advanced course in information systems development.

The Art of Wireless Sensor Networks Habib M. Ammari, 2013-12-17. During the last one and a half decades, wireless sensor networks have witnessed significant growth and tremendous development in both academia and industry. A large number of researchers, including computer scientists and engineers, have been interested in solving challenging problems that span all the layers of the protocol stack of sensor networking systems. Several venues, such as journals, conferences, and workshops, have been launched to cover innovative research and practice in this promising and rapidly advancing field. Because of these trends, I thought it would be beneficial to provide our sensor networks community with a comprehensive reference on as much of the findings as possible on a variety of topics in wireless sensor networks. As this area of research is in continuous progress, it does not seem to be a reasonable solution to keep delaying the publication of such reference any more. This book relates to the second volume and focuses on the advanced topics and applications of wireless sensor networks. Our rationale is that the second volume has all application-specific and non-conventional sensor networks, emerging techniques, and advanced topics that are not as matured as what is covered in the first volume. Thus, the second volume deals with three-dimensional underground, underwater, body-mounted, and societal networks. Following Donald E. Knuth's above-quoted elegant strategy to focus on several important fields, *The Art of Computer Programming: Fundamental Algorithms* (1997), all the book chapters in this volume include up-to-date research work spanning various topics such as stochastic modeling, barrier and spatiotemporal coverage, tracking, estimation, counting, coverage, and localization in three-dimensional sensor networks, topology control, and routing in three-dimensional sensor networks, underground and underwater sensor networks, multimedia, and body sensor networks, and social sensing. Most of these major topics can be covered in an advanced course on wireless sensor networks. This book will be an excellent source of information for graduate students majoring in computer science, computer engineering, electrical engineering, or any related discipline. Furthermore, computer scientists, researchers, and practitioners in both academia and industry will find this book useful and interesting.
