Waterproof and Water Repellent Textiles and Clothing John T Williams, 2017-11-21 Waterproof and Water Repellent Textiles and Clothing provides systematic coverage of the key types of finishes and high performance materials from conventional wax and silicone through controversial but widely used fluoropolymers and advanced techniques such as atmospheric plasma deposition and sol gel technology The book is an essential resource for all those engaged in garment development production and finishing and for academics engaged in research into apparel technology and textile science Rapid innovation in this field is driving new performance demands in many areas including the sporting and military sectors However another innovation driver is the regulatory framework in the USA Europe and globally addressing both health concerns e.g. with PFOS PFOA and environmental impacts e.g. C8 fluorocarbon finishes Both of these aspects are fully covered along with the replacement materials technologies currently available and under development In addition oleophobic and multifunctional coatings are discussed as are aspects of performance testing and applications in sportswear protective clothing and footwear Introduces innovative materials and technologies exploring their current and potential use across different sectors Provides expert guidance on the health and environmental aspects of key waterproof materials and coatings and their associated regulations Demystifies testing processes and design principles

Environmental Hazards of Plastic Wastes Jakub Zdarta, Riti Thapar Kapoor, Helen Treichel, 2025-02-24 Environmental Hazards of Plastic Wastes Bioremediation Approaches for Environmental Clean up focuses on the exploitation of various biological treatment technologies their use to treat plastic contaminants and restoration of contaminated sites The book also addresses the biological treatment of plastic waste and its management of sustainable technologies for its reuse for environmental protection The book examines advanced technologies updated information and future directions for researchers and scientists working in the bioremediation and biodegradation of plastic contaminants and reutilization of plastic wastes in the production of construction materials for environmental safety The treatment of plastic wastes with environmentally benign approaches will be assessed in this book and will also provide ways to protect our natural environment by managing hazardous plastic pollutants through various techno based eco friendly strategies Describes how bioremediation approaches can be successfully applied for waste management eco restoration and environmental protection Provides information on the state of art application of microbes whether individual or synergistic

for treating plastic waste and environmental protection Offers a substantial contribution to solving the problem of plastic waste which contains many hazardous organic compounds *Biomass as Raw Material for the Production of Biofuels and Chemicals* Waldemar Wójcik, Małgorzata Pawłowska, 2021-10-31 For the power industry biomass is just a modern name for the ancient material of plant origin that was converted into energy in the simple technology of burning This book discusses biomass as a raw material for the production of liquid or gaseous biofuels and valuable chemicals Such biomass processing should be beneficial from both economic and environmental points of view Classic technologies of biogas production are still being improved but they always generate waste that differs in terms of chemical parameters depending on the feedstock digested These parameters dictate the manner of their final managing Various biotechnologies allow the use of the biomass of hydrobionts such as cyanobacteria as a raw substance for obtaining different products e g hyaluronic acid biopolymers fertilizers or even drugs Animal fats or algae can be used to produce biodiesel which in turn is used in environmentally friendly urban transport Even municipal solid waste can be a source of useful biomass The authors show how its volume and composition can be predicted by which form of processing it can be converted into valuable products as well as in which ways its negative environmental impact can be limited The Identification of Man-made Environmental Hazards to Health M. E. McDowall, 1987 Environmental hazards to health are a matter of growing concern which is reflected in the amount of public debate about such issues as lead in petrol dumping of nuclear waste and chemical tips The identification of hazards is a huge problem for the medical services This book summarises those hazards which are already identified then shows how health workers can decide whether they have a statistically significant incidence of disease and how they can seek to establish causal relationships between particular hazards and diseases The large number of areas where causal relationships are difficult to prove highlights the need for health workers to be aware of the type of methods outlined in this book
