Building QoS into Distributed Systems Andrew T. Campbell, Klara Nahrstedt, 2013-06-29 Welcome to IWQOS 97 in New York City Over the past several years there has been a considerable amount of research within the field of Quality of Service QoS Much of that work has taken place within the context of QoS support for distributed multimedia systems operating systems transport subsystems networks devices and formal languages The objective of the Fifth International Workshop on Quality of Service IWQOS is to bring together researchers developers and practitioners working in all facets of QoS research While many

workshops and conferences offer technical sessions on the topic QOS none other than IWQOS provide a single track workshop dedicated to QOS research The theme of IWQOS 97 is building QOS into distributed systems Implicit in that theme is the notion that the QOS community should now focus on discussing results from actual implementations of their work As QOS research moves from theory to practice we are interested in gauging the impact of ideas discussed at previous workshops on development of actual systems While we are interested in experimental results IWQOS remains a forum for fresh and innovative ideas emerging in the field As a result of this authors were solicited to provide experimental research long papers and more speculative position short statements for consideration We think we have a great invited and technical program lined up for you this year The program reflects the Program Committees desire to hear about experiment results controversial QOS subjects and retrospectives on where we are and where we are going
