The Science of Flavor Dr. Stuart Farrimond, 2025-08-26. They say you eat with the eyes. But we now know that smell, texture, temperature, color, and even atmosphere, down to the background music, influence how we perceive flavor. As anyone who has lost their sense of taste will know, flavorless food is dull and monochrome; it is flavor that brings food into full technicolor life. Yet it's not always easy to make something tasty; the secrets to flavor can baffle chefs and scientists alike. Food science expert Dr. Stuart Farrimond explores major flavor categories such as salt, acid, and heat from chilies and how they interact, and profiles all the major foods from individual fruit, veg, herbs, and spices to the building blocks such as rice and wheat that give us staples like bread, pasta, and noodles. With pairing notes for every ingredient, you'll soon be inventing new recipes.

*Process-Induced Chemical Changes in Food* Fereidoon Shahidi, Chi-Tang Ho, Nguyen Van Chuyen, 2013-11-11 Chemical changes that occur in foods during processing and storage are manifold and might be both desirable and undesirable in nature While many of the processes are carried out intentionally there are also certain unwanted changes that naturally occur in food and might have to be controlled Therefore efforts are made to devise processing technologies in which desirable attributes of foods are retained and their deleterious effects are minimized While proteins lipids and carbohydrates are the main nutrients of food that are affected by processing it is their interaction with one another as well as involvement of low molecular weight constituents that affects their flavor color and overall acceptability Thus generation of aroma via thermal processing and bioconversion is of utmost importance in food preparation Furthermore processing operations must be optimized in order to eliminate or reduce the content of antinutrients that are present in foods and retain their bioactive components Therefore while novel processing technologies such as freezing irradiation microwaving high pressure treatment and fermentation might be employed control process conditions in a manner that both the desirable sensory attributes and wholesomeness of foods are safeguarded is essential Obviously methodologies should also be established to quantify the changes that occur in foods as a result of processing This volume was developed from contributions provided by a group of internationally recognized lead scientists
