

## Computer Networks – Answer Key

### PART A (3 Marks Each)

#### 1. 1. Define Computer Network

A computer network is a group of interconnected devices that can communicate and share resources (such as files, printers, and internet access). These devices are connected using communication channels like cables or wireless signals.

#### 2. 2. What is POP?

POP (Post Office Protocol) is an email protocol used to retrieve emails from a remote server to a local client. The most common version is POP3, which downloads emails and often deletes them from the server afterward.

#### 3. 3. Write about Hamming Code

Hamming code is an error-detection and error-correction code used in digital communication. It adds redundant bits to data bits so that errors can be detected and corrected. It can detect up to two-bit errors and correct single-bit errors.

#### 4. 4. Define Quality of Service (QoS)

QoS refers to the performance level of a service, such as guaranteed bandwidth, latency, jitter, and error rates in a network. It's crucial for real-time applications like VoIP and video streaming.

#### 5. 5. Difference between CSMA Collision Detection and Collision Avoidance

- Collision Detection (CD): Used in wired networks (e.g., Ethernet). Devices listen for collisions during transmission and stop if one occurs.
- Collision Avoidance (CA): Used in wireless networks. Devices try to avoid collisions by checking if the medium is free before transmitting.

#### 6. 6. Define Tunneling

Tunneling is a method of encapsulating data packets within another packet to enable secure or specialized transmission over incompatible networks (e.g., VPNs using tunneling).

#### 7. 7. Any two differences between Connection-Oriented and Connectionless Services

- Connection-Oriented: Establishes a connection before data transfer (e.g., TCP).
- Connectionless: No prior setup, sends data directly (e.g., UDP).
- Connection-Oriented ensures reliable delivery; connectionless does not.

#### 8. 8. List the Multicast Routing Protocols
