The Mangroves of Southeast Asia in the United Nation's Decade on Ecosystem Restoration Severino III Salmo, Kangkuso Analuddin, Richard MacKenzie, Sahadev Sharma, 2024-01-30 **Participatory Mangrove Management in a Changing Climate** Rajarshi DasGupta, Rajib Shaw, 2017-01-24 This book outlines the performance and management of mangroves in the changing climatic scenario of the Asia Pacific region and draws examples and lessons from the national and community driven mangrove conservation programs of relevant countries including Pakistan India Bangladesh Sri Lanka Myanmar Thailand Cambodia Indonesia the Philippines and Japan as well as the Pacific islands By highlighting the major drawbacks that hinder effective mangrove conservation the book contributes towards enhancing climate resilience of communities through proposition of corrective methods and ameliorative approaches of mangrove conservation Mangroves play an important role in adapting to climate change and provide a plethora of ecosystem services that are fundamental to human survival Yet these ecosystems are exceptionally prone to extinction due to increased human interventions and changes in environmental boundary conditions Especially in the Asia Pacific region mangroves have dwindled at an exceptional high rate over the past three decades As the threat of climate change hovers over millions of people in this region particularly those who crowd the low lying coastal areas conservation restoration of mangroves through appropriate policies and practices remain highly imperative The primary target readers for this book are students and researchers in the fields of conservation and management of mangroves especially from the developing tropical countries of the Asia Pacific region Other target groups comprise policy planners practitioners and NGO workers who will be able to apply the collective knowledge from this work towards proactive mangrove conservation through effective mediation in local communities

critical In particular there is a need to characterize the ecological infrastructures processes and ecosystem functions that underpin the ecosystem services in ways that can be evaluated and tracked Potschin and Haines Young 2016 In addition various intervention measures to restore degraded ecosystems require constant and accurate measurement of the ecosystem characteristics in order to assess the benefits of ecological restoration Vegetation in particular provides a number of provisioning forage production food regulatory climate temperature supporting primary production nutrient cycling and cultural educational recreation ecosystem services as well as biodiversity maintenance Masenyama et al 2022 Remote sensing data contributes significantly to mapping modeling and quantitative valuation of the ecosystem services in a spatially explicit manner It provides an opportunity to use standard protocols at various spatial scales as well as wall to wall mapping of phenomena through time which is critical for monitoring on a continuous basis
