Chemical Solution Deposition of Functional Oxide Thin Films Theodor Schneller, Rainer Waser, Marija Kosec, David Payne, 2014-01-24 This is the first text to cover all aspects of solution processed functional oxide thin films Chemical Solution Deposition CSD comprises all solution based thin film deposition techniques which involve chemical reactions of precursors during the formation of the oxide films i e sol gel type routes metallo organic decomposition routes hybrid routes etc While the development of sol gel type processes for optical coatings on glass by silicon dioxide and titanium dioxide dates from the mid 20th century the first CSD derived electronic oxide thin films such as lead zirconate titanate were prepared in the 1980 s Since then CSD has emerged as a highly flexible and cost effective technique for the fabrication of a very wide variety of functional oxide thin films Application areas include for example integrated dielectric capacitors ferroelectric random access memories pyroelectric infrared detectors piezoelectric micro electromechanical systems antireflective coatings optical filters conducting transparent conducting and superconducting layers luminescent coatings gas sensors thin film solid oxide fuel cells and photoelectrocatalytic solar cells In the appendix detailed cooking recipes for selected material systems are offered

West, 1990-08-03 A modern introduction to the physical principles of electronic ceramic materials Describes theory in structural terms via the language of quantum mechanics and statistical mechanics bridging the gap between purely theoretical solid state texts and strictly applied materials science texts Most of the equations employed are derived from first principles Each chapter describes the relevant properties of the materials covered presents applications of the theory and includes a graded set of problems some to be done on a computer Adopts the convention of the American Ceramic Society Contains tables and figures

Physical Ceramics Yet-Ming Chiang, 1997 [Fundamentals of Materials Science and Engineering](#) William D. Callister, Jr., David G. Rethwisch, 2012 This text treats the important properties of the three primary types of materials metals ceramics and polymers as well as composites and the relationships that exist between the structural elements of these materials and their properties Emphasis is placed on mechanical behavior and failure including techniques that are employed to improve the mechanical and failure characteristics in terms of alteration of structural elements Furthermore individual chapters discuss each of corrosion electrical thermal magnetic and optical properties New and cutting edge materials are also discussed Even if an instructor does not have a strong materials background i e is from mechanical civil chemical or electrical engineering or chemistry departments he or she can easily teach from this text The material is not at a level beyond which the students can comprehend an instructor would not have to supplement in order to bring the students up to

the level of the text Also the author has attempted to write in a concise clear and organized manner using terminology that is familiar to the students Extensive student and instructor resource supplements are also provided Publisher s description
