Scientific and Technical Books and Serials in Print ,1989 *Subject Guide to Books in Print* ,1997 *Evolutionary Algorithms in Molecular Design* David E. Clark,2008-11-21 When trying to find new methods and problem solving strategies for their research scientists often turn to nature for inspiration An excellent example of this is the application of Darwin's Theory of Evolution particularly the notion of the survival of the fittest in computer programs designed to search for optimal solutions to many kinds of problems These evolutionary algorithms start from a population of possible solutions to a given problem and by applying evolutionary principles evolve successive generations with improved characteristics until an optimal or near optimal solution is obtained This book highlights the versatility of evolutionary algorithms in areas of relevance to molecular design with a particular focus on drug design The authors all of whom are experts in their field discuss the application of these computational methods to a wide range of research problems including conformational analysis chemometrics and quantitative structure activity relationships de novo molecular design chemical structure handling combinatorial library design and the study of protein folding In addition the use of evolutionary algorithms in the determination of structures by X ray crystallography and NMR spectroscopy is also covered These state of the art reviews together with a discussion of new techniques and future developments in the field make this book a truly valuable and highly up to date resource for anyone engaged in the application or development of computer assisted methods in scientific research **An Index** A. Whitaker's Books in Print ,1998 The British National Bibliography Arthur James Wells,1992 **The Genetics Of Altruism** Scott Boorman,Paul R. Levitt,2012-12-02 The Genetics of Altruism covers the primary findings on social evolution social trait and altruism from a population genetics standpoint to establish a system of genetic boxes It presents an evolutionary question with two faces Why are there so many social species Why in all the diversity of the animal kingdom are the social species so few To address the evolutionary question this book focuses on recognition of the fact that on an evolutionary time scale genetics must underlie all changes in the capacity for social structure and other aspects of organic evolution It presents comparative analyses framed in mathematical terms mathematical concepts as a means of getting outside human perhaps more generally primate and carnivore frames of reference and alternative network combinatorics as a natural basis for comparing social structures that are phylogenetically remote It also discusses the comparative biology of social behavior on a purely descriptive basis through the social and evolutionary structures emergent The book concludes by discussing major evolutionary pathways various kinds of preadaptedness for sociality and the use of cascade principle to suggest ways in which human evolution may have been a special case This book is a valuable resource for biologists social scientists researchers students and all those who want to broaden their knowledge in the field of social behavior and altruism
