Time Management For System Administrators Thomas A Limoncelli:

Time Management for System Administrators Thomas A. Limoncelli, 2005-11-22 Time is a precious commodity especially if you're a system administrator. No other job pulls people in so many directions at once. Users interrupt you constantly with requests preventing you from getting anything done. Your managers want you to get long term projects done but flood you with requests for quick fixes that prevent you from ever getting to those long term projects. But the pressure is on you to produce and it only increases with time. What do you do? The answer is time management. And not just any time management theory you want *Time Management for System Administrators* to be exact. With keen insights into the challenges you face as a sys admin bestselling author Thomas Limoncelli has put together a collection of tips and techniques that will help you cultivate the time management skills you need to flourish as a system administrator. *Time Management for System Administrators* understands that a Sys Admin often has competing goals: the concurrent responsibilities of working on large projects and taking care of a user's needs. That's why it focuses on strategies that help you work through daily tasks yet still allow you to handle critical situations that inevitably arise. Among other skills you'll learn how to: Manage interruptions. Eliminate timewasters. Keep an effective calendar. Develop routines for things that occur regularly. Use your brain only for what you're currently working on. Prioritize based on customer expectations. Document and automate processes for faster execution. What's more, the book doesn't confine itself to just the work environment either. It also offers tips on how to apply these time management tools to your social life. It's the first step to a more productive, happier you. *Automating System Administration with Perl* David N. Blank-Edelman, 2009-05-14 If you do systems administration work of any kind you have to deal with the growing complexity of your environment and increasing demands on your time. *Automating System Administration with Perl* Second Edition not only offers you the right tools for your job but also suggests the best way to approach specific problems and to securely automate recurring tasks. Updated and expanded to cover the latest operating systems technologies and Perl modules this edition of the *Otter Book* will help you: Manage user accounts. Monitor filesystems and processes. Work with configuration files in important formats such as XML and YAML. Administer databases including MySQL, MS SQL and Oracle with DBI. Work with directory services like LDAP and Active Directory. Script email protocols and spam control. Effectively create, handle and analyze log files. Administer network name and configuration services including NIS, DNS and DHCP. Maintain, monitor and map network services using technologies and tools such as SNMP, nmap, libpcap, GraphViz and RRDtool. Improve filesystem process and network security. This edition includes additional appendixes to get you up to speed on technologies such as XML, XPath, LDAP, SNMP and SQL. With this book in hand and Perl in your toolbox you can do more with less: fewer resources, less effort and far less hassle. **Supercomputers for Linux SysAdmins** Sergey Zhumatiy, 2025-11-07 Supercomputers and High Performance Computing (HPC) clusters are not so exotic as people imagine these days.
