A TRANSFORMATIVE SHIFT SUPPORTED BY THE INTRODUCTION OF 5G

The synergistic relationship between upcoming technologies in the connectivity and computing space often leads to a revolution across markets. With applications and use cases morphing to take full advantage of new technologies, such as 5G, cloud, and edge computing, the industry is investigating new business opportunities, otherwise not possible before the introduction of these technologies.

This white paper will focus on augmented reality (AR) and virtual reality (VR), among the most attractive use cases for 5G. These technologies are promising to transform the way content is consumed and communicated, and will no doubt help a wide variety of industries increase productivity and change the way they do business. Workflow assistance and "see-what-I-see" remote interaction and guidance have seen strong uptake already among existing AR rollouts. ABI Research estimates the total AR market will reach US\$11.4 billion by 2021, and the total VR market will reach US\$65 billion within the same timeframe.

Kanta Prasad Sharma, Shaurya Gupta, Ashish Sharma, Dac-Nhuong Le, 2023-04-26 EVOLVING NETWORKING
TECHNOLOGIES This book discusses in a practical manner some of the critical security challenges facing the ever evolving
networking technologies of today In an age of explosive worldwide growth of electronic data storage and communications
effective protection of information has become a critical requirement especially when used in coordination with other tools
for information security and cryptography in all of its applications including data confidentiality data integrity and user
authentication While the importance of cryptographic technique i e encryption in protecting sensitive and critical information
and resources cannot be overemphasized an examination of the technical evolution within several industries reveals an
approaching precipice of scientific change The glacially paced but inevitable convergence of quantum mechanics
nanotechnology computer science and applied mathematics will revolutionize modern technology The implications of such
changes will be far reaching with one of its greatest impacts affecting information security and more specifically modern
cryptography The book takes the reader through these issues As the security systems design becomes more and more
complex to meet these challenges a mistake that is committed most often by security specialists is not making a
comprehensive analysis of the system to be secured before choosing which security mechanism to deploy Often the security
mechanism chosen turns out to be either incompatible with or inadequate for handling the complexities of the system In
addition the book also discusses three main points Configuration management is a critical issue and as networks are
increasing in size their configuration needs to be managed Devices may conflict with each other in terms of configuration
Therefore it becomes challenging for firewalls to be up to date according to network policies Scalability of the network is
another big challenge it would be easier to address if the network stays the same but the network is ever expanding with a
constant increase in the number of devices devoted to the network Vendor lock in Business decisions that are taken today are
revolving around the assumptions and capabilities of the current vendor and environment scenario Buying the best solutions
from today s vendors involves how to interoperate integrate and support multiple solutions It may involve tearing out all of
the longstanding kits without tearing down the entire network at the same time Audience This book specifically appeals to
industry practitioners IT researchers and students regarding network technological management Ad Hoc Networks
Yifeng Zhou, Thomas Kunz, 2018-01-18 This book constitutes the refereed proceedings of the 9th International Conference on
Ad Hoc Networks AdHocNets 2017 held in Niagara Falls Ontario USA in September 2017 The 19 full papers were selected
from 30 submissions and cover a variety of network paradigms including mobile ad hoc networks MANETs sensor networks

networks encompassing the globe the Digital Revolution is altering the very fabric of our lives with alarming rapidity New technologies are bringing about an ever closer union between human beings and machines whilst at the same time transforming our planet into an increasingly hybrid cyber physical world The current rollout of fifth generation wireless communication networks or 5G is central to the project to create a global electronic ecosystem in which we will be obliged to live This will provide the basis for an all pervasive Internet of Things and the widespread integration of Augmented and Virtual Reality into human experience But what genuine human needs will this serve Does the planet really need to be made smart Will our health and that of other living creatures really be unaffected by exposure to escalating levels of electromagnetic radiation As we enter a new era of extreme technology driven by a momentum that seems beyond the constraint of any spiritual or moral consideration both human beings and nature face an unprecedented challenge Jeremy Naydler argues that it is a challenge that can only be met through a re affirmation of essential human values and the recovery of a sacred view of nature From this grounding we can work towards a truly human future that rather than creating yet more pollution and toxicity will bring blessing to the natural world to which we belong
