Fundamentals of Data Analytics Prof. Dipanjan Kumar Dey, Data analytics help a business optimize its performance, perform more efficiently, maximize profit, or make more strategically guided decisions. The techniques and processes of data analytics have been automated into mechanical processes and algorithms that work over raw data for human consumption. Various approaches to data analytics include looking at what happened (descriptive analytics), why something happened (diagnostic analytics), what is going to happen (predictive analytics), or what should be done next (prescriptive analytics). Data analytics relies on a variety of software tools ranging from spreadsheets, data visualization, and reporting tools, data mining programs, or open source languages for the greatest data manipulation.

[Data Analyst Interview Questions and Answers - English](#) Navneet Singh, Preparing for a data analyst interview requires a combination of technical knowledge, analytical thinking, and communication skills. Here are some common interview questions along with

model answers to help you get ready Technical Questions What is the difference between a database and a data warehouse Answer A database is designed to efficiently handle transactions and store real time data typically structured to support CRUD operations Create Read Update Delete A data warehouse on the other hand is designed for analytical purposes and is optimized for reading and aggregating large volumes of historical data Data warehouses support complex queries and reporting needs Explain the ETL process Answer ETL stands for Extract Transform Load It is a process used to move data from source systems to a data warehouse Extract Data is extracted from various source systems Transform The extracted data is transformed into a suitable format or structure for querying and analysis This may involve cleaning filtering and aggregating the data Load The transformed data is loaded into the target data warehouse What is the difference between supervised and unsupervised learning Answer Supervised learning involves training a model on labelled data meaning the model learns from input output pairs to make predictions Examples include regression and classification tasks Unsupervised learning on the other hand deals with unlabelled data and aims to find hidden patterns or intrinsic structures within the data such as clustering and association tasks How would you handle missing data in a dataset Answer Handling missing data can be done in several ways Deletion Removing rows or columns with missing values if they are not crucial or if the proportion of missing data is small Imputation Filling in missing values using various methods such as mean median mode or more sophisticated techniques like K Nearest Neighbours KNN imputation or regression imputation Prediction Models Using machine learning models to predict and fill in missing values based on other available data What is a JOIN in SQL Describe different types of JOINS Answer A JOIN in SQL is used to combine rows from two or more tables based on a related column between them Types of JOINS include INNER JOIN Returns only the rows with matching values in both tables LEFT JOIN LEFT OUTER JOIN Returns all rows from the left table and matched rows from the right table Unmatched rows from the left table will have NULLs for columns from the right table RIGHT JOIN RIGHT OUTER JOIN Returns all rows from the right table and matched rows from the left table Unmatched rows from the right table will have NULLs for columns from the left table FULL JOIN FULL OUTER JOIN Returns all rows when there is a match in either table Unmatched rows will have NULLs from the other table CROSS JOIN Returns the Cartesian product of the two tables meaning all possible combinations of rows Analytical Questions How would you approach a data analysis project Answer My approach to a data analysis project involves several steps Define the Objective Understand the business problem or goal Data Collection Gather data from relevant sources Data Cleaning Prepare the data by handling missing values removing duplicates and correcting errors Exploratory Data Analysis EDA Analyse the data to find patterns trends and insights using statistical methods and visualizations Modelling Apply statistical or machine learning models to the data Interpretation Interpret the results in the context of the business problem Communication Present findings in a clear and concise manner often using visualizations and summary reports Actionable Insights Provide recommendations based on the analysis Describe a time when you used data to make a

business decision Answer In my previous role we were experiencing a drop in customer retention I conducted a cohort analysis to identify patterns and trends among different customer segments The analysis revealed that customers who engaged with our new user tutorial had significantly higher retention rates Based on these findings we decided to improve and promote the tutorial feature which ultimately led to a 15% increase in retention over the next quarter

Behavioural Questions How do you prioritize your tasks when working on multiple projects Answer I prioritize tasks based on their impact urgency and deadlines I start by listing all tasks and then use a prioritization matrix to categorize them High impact urgent tasks take precedence I also communicate with stakeholders to ensure alignment on priorities and manage expectations Regular progress updates and adjusting priorities as needed are key to managing multiple projects effectively

Describe a challenging data analysis problem you faced and how you solved it Answer In one project I encountered a dataset with significant missing values and inconsistencies To address this I first performed a thorough data audit to understand the extent of the issues I then used a combination of imputation techniques for missing data and developed scripts to standardize and clean the data After ensuring the data quality I was able to proceed with the analysis which provided critical insights for our marketing strategy

Soft Skills Questions How do you communicate complex technical information to a non technical audience Answer I focus on simplifying complex concepts by using analogies and avoiding jargon Visualizations like charts and graphs can help convey data insights more clearly I also tailor my message to the audience s level of understanding and emphasize the implications of the data rather than the technical details For instance instead of explaining the intricacies of a machine learning algorithm I would highlight the predicted outcomes and their potential impact on the business

What tools and software are you proficient in as a data analyst Answer I am proficient in SQL for database querying Python and R for statistical analysis and machine learning and Excel for data manipulation and reporting For data visualization I have experience with tools such as Tableau Power BI and matplotlib seaborn in Python

Additionally I am familiar with data cleaning and preprocessing using libraries like pandas in Python

Scenario Based Questions Imagine you are given a dataset with millions of rows and several features How would you go about analysing it Answer I would start by loading the data and performing an initial exploration to understand its structure and content Using summary statistics and visualizations I would identify key features and potential data quality issues For large datasets I would leverage tools and techniques such as sampling distributed computing frameworks e g Spark and efficient data manipulation libraries e g pandas in Python to handle and analyse the data I would then proceed with feature engineering model building and evaluation ensuring to document each step and validate the results
