Shifting Gears Susan Handy, 2023-10-31 An expertly woven history and critique of the ideas shaping transportation in the United States Excruciating traffic jams Struggling transit agencies An epidemic of pedestrian fatalities It is clear that transportation is not working in the United States and that we need to rethink our approach In *Shifting Gears* Susan Handy provides an in depth history of the ideas embedded in American transportation policy and the emergence of new ways of thinking that could give us better transportation options Weaving in bits of her own personal narrative Handy gives readers a deeper and clearer understanding of our transportation system and the roots of its successes and failures Handy covers the myriad costs of car ownership the futility of expanding highways and the misplaced faith in technological innovation She offers new ideas and strategies that can improve the health of our car centric transportation system most crucially the idea that communities across the country must create an array of choices for daily travel *Shifting Gears* asserts that a diverse transportation ecosystem is essential for creating more just sustainable communities but getting there will take a dramatic shift in how we think about transportation

Airport Offsite Passenger Service Facilities Arkopal K. Goswami, 2009 Offsite airport facilities provide ground transportation baggage and passenger check in and other transportation services to departing air passengers from a remote location The purpose of this study was to develop models to determine the airports that might be candidates for such a facility and estimate the percentage of travelers that would choose to use one to access the airport Offsite airport facility operations were examined in New York Los Angeles Zurich London and Hong Kong and passenger data were obtained from surveys distributed at six U S airports A total

of 1 700 air traveler questionnaires were completed at four airports without offsite facilities i e Baltimore Washington International Thurgood Marshall Airport BWI Charlottesville Albemarle Airport CHO Norfolk International Airport ORF and Richmond International Airport RIC and at two airports with offsite facilities that provide ground transportation only i e Boston Logan International Airport BOS and San Francisco International Airport SFO The survey results show that 68% of passengers who traveled directly to the airport terminal would consider using an offsite airport facility if available Of the passengers who currently use an offsite airport facility that provides only ground transportation almost 70% indicated that their access would be improved by expanded services including baggage and passenger check in The two main reasons cited for using the offsite airport facilities surveyed in this study were reduced travel time variability 43% and lower cost 39% With the data collected at the six airports two models were developed sequentially to determine the demand for offsite facilities The airport access quality model was used to establish initial demand by assuming that the likelihood of a viable offsite facility is directly proportional to the difficulty or resistance encountered during the current access trip to the airport This model yielded expected results when tested with a former offsite airport facility The offsite facility usage model was used to determine the probability of passengers using an offsite facility while accessing an airport and accurately estimated 58% of the test set responses The airport access quality model develops a value for total resistance and ranks the airports according to the current difficulty encountered by passengers during their access trip to the airport When applied to three Virginia airports passengers accessing RIC had the largest total resistance Accordingly RIC is considered to have the highest potential demand for an offsite facility The offsite airport facility usage model was based on flight departure time and variability in ground travel time as predictors of the final demand For example the model estimated an offsite airport facility demand of 74% for passengers departing between 8 and 10 30 A M when ground travel times vary by 45 min rounded to the nearest 15 min interval For passengers departing before 8 00 A M and with a ground travel time that varies by no more than 5 min the models estimated demand at only 26% The offsite airport facility usage model was also used to identify the zones defined by zip codes where potential use of offsite terminals is substantial
