Co-Design of Rehabilitation Programming Janelle Unger, James Middleton, John Bourke, Dalton L. Wolfe, 2025-01-14. Co-Design is an approach used in healthcare that integrates patient and care partner experiences into service and program development and delivery. Co-design involves both users and healthcare professionals or researchers working together to identify opportunities for improvement, set goals, evaluate progress and outcomes, and reflect on processes. Implementing a co-design process improves person-centered care and results in positive outcomes for both patients and staff. Research in this area has increased significantly over the previous 15 years; however, much of this work has been focused on primary care. It is important to focus on the use of co-design in rehabilitation settings specifically due to the unique goals of these programs. The goal of this Research Topic is to highlight the use of co-design in rehabilitation programming and to value the knowledge and experience of those with lived experience who use rehabilitation services. The insights gained will provide a foundation for future rehabilitation program development.
